

# **PROJECT REPORT**

The journals of this project are regular in their articles are properly edited and published by the concerned authority with regular editors and publishers. While going through the text of these journals articles, it is noticed that highly useful information is available in these journal articles which is very useful for the chemistry science professional in providing the latest reasearches and developments taking plce in the field of chemistry science. So highly useful information can be utilize to the students, teachers, researchers, scholars, philosophers and all other user community for fulfill their concerned knowledge areas.

# PROJECT REPORT

**An evaluation of free e-journal available on  
The web in the field of chemistry**

**Under the supervision of  
(Rama Kant Shukla )**

**PROJECT REPORT SUBMITTED TO  
INDIRA GANDHI NATIONAL OPEN UNIVERSITY  
IN PARTIAL FULFILLMENT OF THE REQUIRMENT FOR  
THE AWARD OF THE POST GRADUATE DIPLOMA IN LIBRARY  
AUTOMATION AND NETWORKING(PGLDAN)**

**STUDENT NAME :MENKA RANJANA  
ENROLLMENT NUMBER :051534224

**PROFORMA FOR APPROVAL OF PROJECT PROPOSAL**

Enrolment No. 051534224

TLCI Study Centre

Name and Address of the Student : MENKA RANJANA  
DU-98, II Floor  
Pitampura, N. Delhi-110088

Title of the project : An Evaluation of free E-journal Available on web in the field of Chemistry.

Course Code and Title : MLIP-008 Project proposal

Name and Address of the Supervisor : Rama Kant Shukla, Block-A, flat No. 183, 1 Floor  
Shalimar Garden, main Sahibabad  
Ghaziabad

Is the Supervisor an Academic Counsellor of IGNOU? Yes  No

If Yes, Name and Code of Study Centre and the courses he/she is counseling For and since when : Regional Center II, 2900  
Details available in the Resume.

Not of the Students currently working: Two

Signature of Student Menka Ranjani

Signature of Supervisor Dwile

Date: 26 04 05

Date: 28-04-05

Please do not forget to enclose the synopsis of the project and the Bio-data of the Supervisor. In case the complete and signed Bio-Data of the Supervisor (Even if the proposed supervisor is an academic counselor of IGNOU's (PGDLAN Programme Coordinator) is not enclosed, the proposal will not be entertained.

**For Office Use Only**

\* clarify the methodology for evaluation of E-journal.

## Certificate of Originality

**This is to Certify that the project Report entitled "An Evaluation of Free electronic Journals in the field of Chemistry".submitted to Indira Gandhi National Open University.**

**In partial fulfillment of the requirement for the award of POST GRADUATE DIPLOMA IN LIBRARY AUTOMATION AND NETWORKING(PGDLAN). Is an Original work carried out by Ms. Menka ranjana . The matter embodied in this project is a original work done by the student and has not been submitted whether to the university or any other university/ Institute for the fulfillment of the requirement of any course of study.**

## **ACNOWLEDGEMENT**

I Express my respect and gratitude to my guide Mr R.K Shukla Librarian ,delhi college of engineering, Delhi for their humble guidance and inspiration. Under whose supervice and diligent guidance.

I am able to undergo the study of "An Evaluation of free Electronic Journals in the field of Chemistry "as a part of my course for the partial fulfillment of the requirement for my post Graduate Diploma in Library Automation and Networking (PGDLAN).

Sir you may not know this but you are an Inspiration for many a student like me.I aspire to attain the depth of Knowledge and understanding of internet resources in the making of this project.

This study helps me to see how much number of free on line Journals are available in the field of chemistry and providing me the real opportunity to learn a lot.

I take this opportunity to thank the people who have inspired, monitored, directed and seen the project through to its completion like staff of Delhi College of engineering,and my friend pushpender in making available all sorts of resources.

I extend my greatful acknowledgement to my parents,my brother & speacilly my Husband who gave me support and inspiration constantely.

# TITLE

**An Evaluation  
of free Electronic Journals  
Available on the web in the field of chemistry**

# Introduction

In our terms the library is the collection of information first we have to know what is information. Information Something learned; facts that are gathered or a measure of the content of a message. It can be argued whether it is a product, commodity, resource, or process. It can be a sensible statement, opinion, fact, concept or idea, or an association of statements, opinions, or ideas. It is closely associated with knowledge in that once information has been assimilated, correlated, and understood it becomes knowledge.

Today where we are in the 21<sup>st</sup> century with advance technology take for instance access to research literature most new knowledge in the science appears in the form of paper.

In the research journals and most libraries in the world could offered them. As most of them were published in the west. Researches in the rest of the world had to wait for the few months to receive them by surface mail. The subscription charges of most of these journals rise year after year much higher than the rates mush higher than the inflation rate. These financial constraints of subscribing to print copies of journals published by for profit companies and the advent of the internet have a part filled the cry for alternative business models. The advent of the internet and world wide web also opened up another means to do away with the equality of the field of accessioning research information.

## First we have to know

what is journals:- A periodical publication in which researchers report the results of their work to their peer community; compare with Articles are reviewed by an editorial board of scholars in the field prior to acceptance for publication, and generally include an abstract and numerous citations to previous work.

The writing style in journals is formal, and journals generally have little or no advertising or glossy, catchy graphics and illustrations. Journals often have pages numbered continuously through the several issues of a given volume .

## what is electronic journals:-

A publication, often scholarly, that is made accessible in a computerized format and distributed over the Internet. An electronic journal or e-journal may have a traditional paper counterpart or historical antecedent. We can search for articles and print the full-text articles in these journals.

Now what is free electronic journals:-

free electronic journals Means the journals those who are accessed freely on the web Means without paying any charges. there are two kind of free electronic journals one those who are accessed on the web without Getting any registration and other those who are accessed By getting registration without any payment.

Today we are living an unequal world .The developing world is not an easy place for conducting research . Researches in developing countries disadvantaged in every respect compared with their counter parts in developed countries as a result researches in developing countries have to work harder under difficult condition to gain recognition. Imagine that every author makes the full text of his/her papers anywhere in the world can access them with a few key strokes and mouse click. the electronic communication and the internet changed the complexion of science remarkably . Science publishers begin putting out electronic version of their hard copy journals Were started purely as electronic journals and not hard copies at all.

There are so many online information available internet with the help of which the user get his/her relevent information's related to his/her fields of the specilization. The user may be an individuals or group of organizations journals ore publications which appers periodically several traditional journals are now been publishes both on the web and in print. Internet based journals started to apper in the beginning of 1990. These journals were mostly delivered as an open access or with paying subscription charges. The library and information center made them accessible their gopher sites .The web as a means of delivery of electronic information has grown steadily since then. As publishers experiment with different publication modes and models .New journals have evolved based on the graphic capabilities of the internet That are available only in the electronic form. Online subscription of journals is becoming very popular now a days.

The project had been undertaken with the objective to provide the list of free on-line journals to enable the students, professors and researchers to access the latest researches in their field.

E-journals had become critical tools for researchers to modify and improve their skills. The free online journals list will also help in updating the individual knowledge so that they can fulfill the demand of the profession. A key point is that the cost of journals which are freely available to the entire world in perpetuity is a fraction of the amount to produce the research in the first place. This is moreover consistent with the public policy that goes for what is in large part publicly funded research.

The list of the journals which are freely available on the net are presented as of web pages along with the hard copy.

## **METHODOLOGY**

Various search engines like goggle excite , northern site and scholar. Google.com will be used for searching the free on-line journals in the field of chemistry. After finding out the title of e-journals they will be verified from the actual sites and their details like publishers editors periodicity and medium of availability (print/on-line/cd-rom) will be added. search engine used in this project.

1. Google.com
2. Excite.com
3. Northernlite.com
4. Mama.com
5. Scholargoogle.com.

Directories used in making of this project.

1. Doaj.org
2. freefulltext.com
3. openaccess.com
4. highwirepress.com

key words used in the searching of matters

1. electronic journals
2. free electronic journals
3. free electronic journals in chemistry
4. free electronic journals in chemistry in english
5. open access journals in chemistry.
6. free full text journals in chemistry.

# EVALUATION OF WEB DOCUMENTS/JOURNALS

Search engines generate results in millions. In which only a few are relevant. In such an environment it is highly recommended that pages must be evaluated. Louis shores has given a check list for evaluation of web documents. Librarians can use these checkpoints for evaluation of web documents, which they keep in digital library or subject gateway collections. Commonly these points are known as ASTAFS.

## 1. Authority—

The very first step is to identify the author and publisher of the web documents. On internet it is very difficult to find the author and publisher of a website, but one can easily find out the organization, which has hosted the site and is responsible for content generation.

## 2. Scope:--

What is the subject covered by the website? Which author has contributed to the website in case there are many contributors? What is the recent level of the website? Whether the links to other sites are given; if so whether they are working or not? For example, the Berkeley sunsite Digital library, at California has an exclusive of images in different subject areas.

## 3. Treatment:-

How accurately is the subject covered? Is the matter information provided recent?

## Arrangement:-

How the information is arranged on the websites. Besides arrangement the most common feature is the style of rendering information. The style must be eye catching.

## **5. Format:-**

**What is the format of the document? Here format means basically audio ,video, text and image format.**

## **6. Special Feature:--**

**If there is any special feature associated with the document? Specially, has indexing been done ? Download given etc.**

# INPUT TO THE PROJECTS

By using suitable hardware /software and with the different search engine free online available journals can be searched . A completed details of respected websites will be made available to enable the students and researches to open the sites and consult the journals. Input given for the searching of the free electronic journals in different search engine .

1. journals--- Results vary from search engine to search engine  
.like I got -----results in google .and got-----  
results in mama.com
2. electronic journals---got-----results from dogpile and got -----results  
from -----altavista.
3. free electronic journals -----got -----results from google and got -----  
----results from mama.
- 4.free electronic journals in chemistry—got -----results  
from google and got ----- results from dogpile.

After using these keywords I also used advanced search in different search engine.

## 1.Search Results

Results 1 - 10 of about 827,000 for e-journal - 0.12 sec. (About this page)

# OUTPUT JOURNALS

The project will provide comprehensive list of free online journals in the field of chemistry. These journals contain a very good standard of information. Provider and outstanding information. Chemistry professionals more acquainted with the latest advancement taking place in their fields to keep user more acquainted with the latest advancement taking place in their field. to keep user more abreast the latest development in their related subject. we need its free availability on the public internet permitting in user to read, download copy, distribute print search or link to the full text of these free online journals. crawl them for indexing passed them as data to software and use them for any other lawful purpose. The journals open the door for the recent research and development taking place in the field of chemistry.

## **PROCESS LOGIC**

**As the use of different search engines ,these search engines produced ifferent results .The use of logic actual verification of the sites and their contents is required in every case.**

## TOOLS/ PLATEFORM

In the development of a project the selection of an appropriate tools, searching technique and a platform is of primary importance. The major part of credit of success of a project goes to the searching technique chosen by the developer. Selecting a technique from the ocean of the knowledge is very difficult. A developer has to consider the various features and functionalities that a particular technique can provide him/her how easily and successfully the requirement of a user can be fulfilled depend on the search engine chosen. Moreover the developer also has to take care of the various facilities, she can use in the development of this project it has been taken into great consideration that Searching technique and search engines should be authentic and accurate.

Tools used-----

1. internet explorer
2. different search engines
3. intel pentium---IV, 2.4 GHZ PC
4. A high speed of internet connection with a speed of 1.44 kb/s
5. HTML language.

1. Internet Explorer----Internet Explorer is a browser .a browser is a client software or program that showcase certain files on the internet in an accessible ,visually pleasing way.

One of the great challenges of developing web based application is the great diversity of client side browser in the use. Not only is the browser world

divided into netscape navigator ,microsoft internet explorer and many other web Browsers. But for any particular browser ,many version(1.0,2.0, etc) for many different platform(unix,microsoft window, apple macintosh,IBM os/2., inux,etc) are in use .there is great to knowing the details of all these browsers When developing web based application.

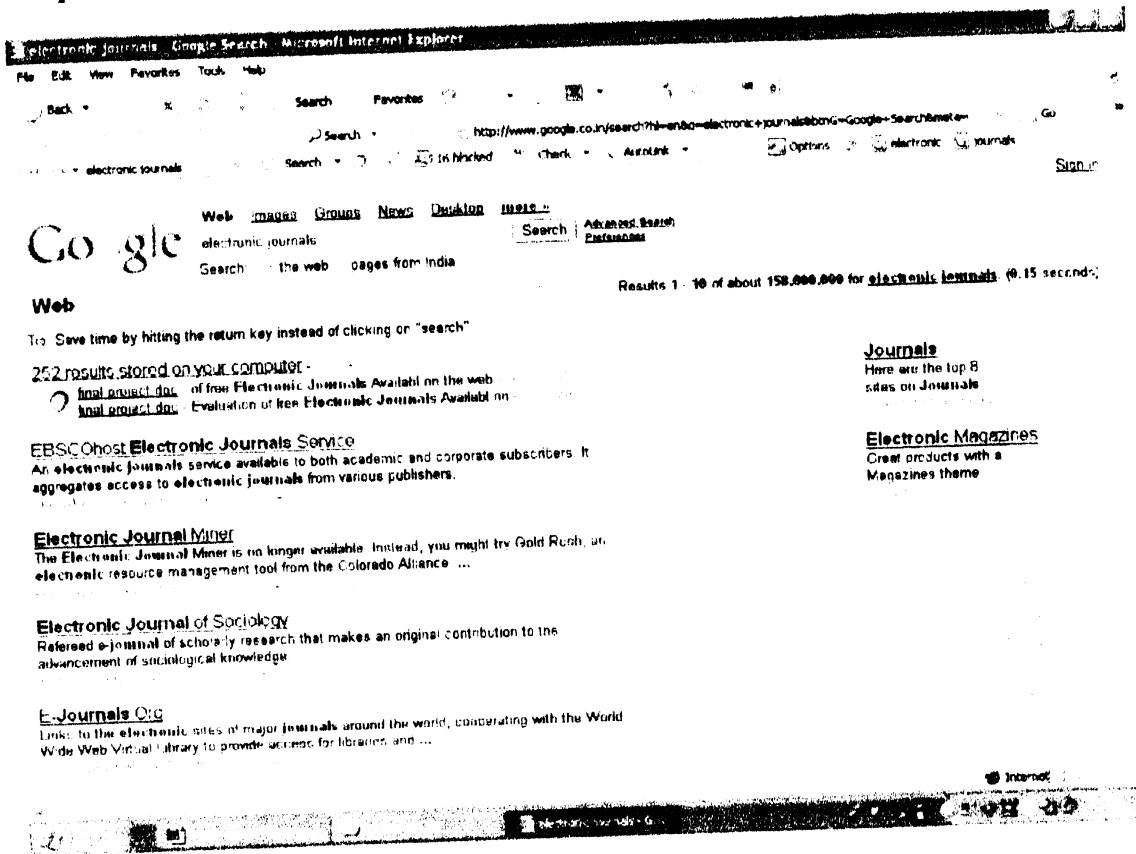

2. search engines-----the enourmous amount of information available on the net is made accessible with the help of search engine . search engines are the tools that help to locate information on the web . there are several web based search engines available on the net,each with its own formate and characteristic feature for searching,

search engines used in this project.

1. Google-----<http://www.google.com>
2. yahoo ----- <http://www.yahoo.com>
3. altavista----- <http://www.altavista.com>
4. hotbot----- <http://www.hotbot.com>
5. northanlite---- <http://www.nothern-lite.com>
6. dogpile----- <http://www.dogpile.com>
7. mama----- <http://www.mama.com>

some detail information about important search engine which used fluentely in the development of this project

google search—front page of the google search we have to put key words in the search box .the search engine now processess or search and retrieve the result the search was done for the electronic journals searching the whole web.Google retrieved the result and presented the search result as presented.

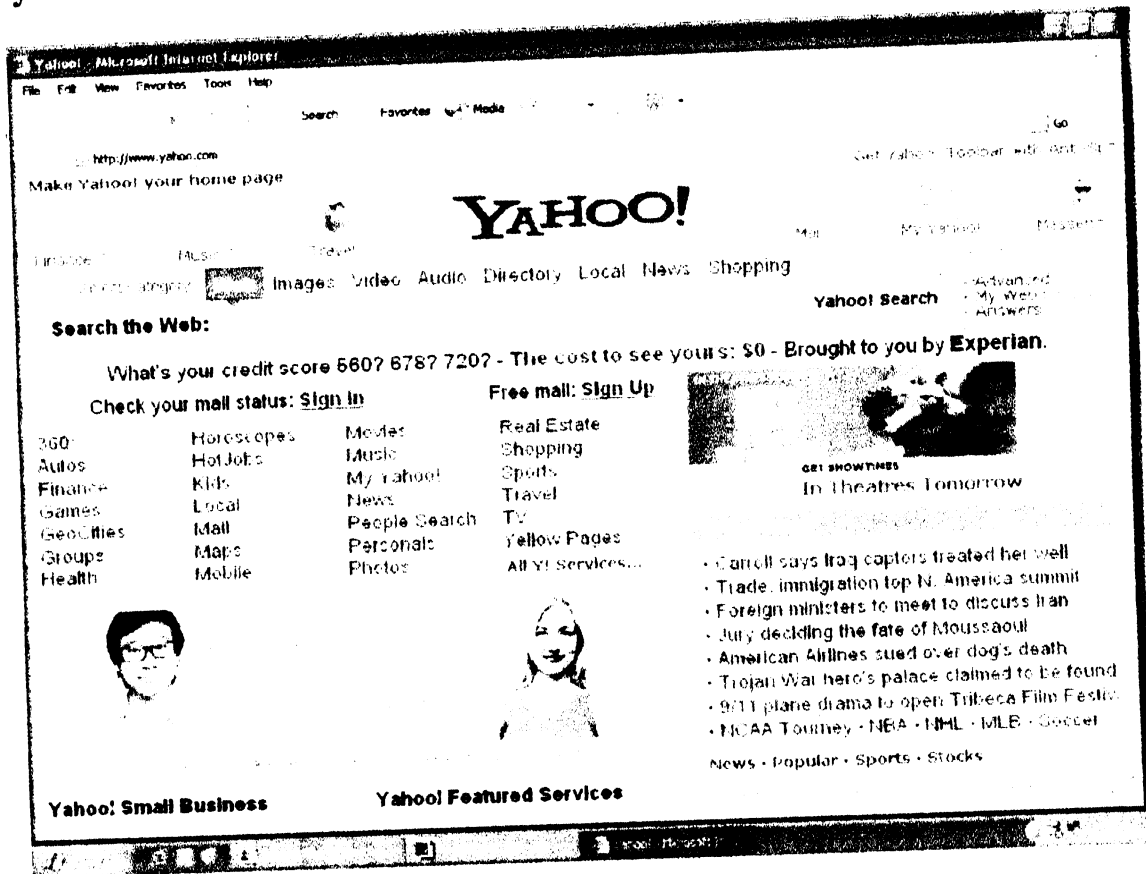

The search result are presented and the first 10 matches are shown .

Each match gives the following information.

1. Title of the original page.
2. Brief information about the page.
3. The web site address
4. All the matches are hyperlinked to the respective webpages. We can open the page by just clicking on the hyperlink.

Yahoo search---the another search engine used in this project is yahoo Search .. yahoo home page.

We can enter the search term in the "search the web text box". The result for the term electronic journals are displayed as follows

**HTML language— HTML is a mark up language .it is used to formate text and information . this “marking up”of information is different from the intent of traditional programming language ,which is to perform action in a designated order. In HTML text is marked up with element . delineated by tahs that are keywords contained in pairs of angel brackets**

**For example—the HTML element itself which indicates that we are writing a web page to be rendered by a browser, begins with a start tag of <HTML> and terminates with an End tag of </HTML>.**

**The Society of Chemical Engineers, Japan (SCEJ) was founded in 1936, with the former name of The Society of Chemical Machinery Engineers. The role of SCEJ is to promote the advancement of academic standards in chemical engineering and to facilitate and organize activities of the key academic groups. For these purposes SCEJ has been providing opportunities to enable industrial academic and governmental sectors to work think and plan together in a cooperative environment. In the field of engineering SCEJ is promoting cooperation with related academic societies and associations. Through such activities SCEJ is striving to foster new research and technology development over a wide range of industrial fields related to chemical engineering. SCEJ is using teamwork to realize dreams for the future and human benefits.**

**The first issue of *Croatica Chemica Acta* (Croat. Chem. Acta) appeared under the name *Arhiv za hemiju i farmaciju* (Archive for Chemistry and Pharmacy) in Zagreb on April 1, 1927.**

It was published by the Yugoslav Chemical Society as a quarterly chemical journal. The Yugoslav Chemical Society was founded in Zagreb on January 23, 1926. The first President of the Society and the first Editor of the journal was the analytical and inorganic chemistry. *CROATICA CHEMICA ACTA* is an international journal devoted to the publication of papers from all fields of chemistry. Four issues are published annually.

***CROATICA CHEMICA ACTA* is supported by the Ministry of Science and Technology of the Republic of Croatia and to some extent the funds are provided by subscriptions and advertisements.**

*Atmospheric Chemistry and Physics (ACP)* is an interdisciplinary journal for the publication of high quality studies investigating the Earth's atmosphere and the underlying chemical and physical processes.

PUBLISHERS--Copernicus is a publisher of high quality literature in science and fine arts since 1990. Copernicus is specialized in serving scientific associations in publishing and distributing their books, journals and magazines, but it also publishes and distributes its own literature. Copernicus plays a leading role in the areas of online, of public peer-reviewed and of open access publications

The Journal of Biological Chemistry is owned and published by the American Society of Biochemistry and Molecular Biology, Inc. It is published weekly in printed and electronic versions. Information about the JOURNAL is available on-line at: <http://www.jbc.org>.

*The American Society for Biochemistry and Molecular Biology (ASBMB) is a nonprofit scientific and educational organization with over 11,900 members. Most members teach and conduct research at colleges and universities. Others conduct research in various government laboratories, nonprofit research institutions and industry. The Society's student members attend undergraduate or graduate institutions.*

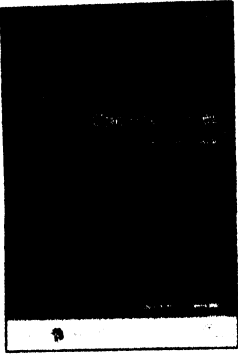

Founded in 1906, the Society is based in Bethesda, Maryland, on the campus of the Federation of American Societies for Experimental Biology. The Society's purpose is to advance the science of biochemistry and molecular biology through publication of scientific and educational journals .

JRL	<u><a href="http://www.oxfordjournals.org">http://www.oxfordjournals.org</a></u> <u>.html</u>

A major international publisher of academic and research journals, Oxford Journals publishes and develops titles in partnership with the world's most prestigious learned societies. Their goal is to bring high quality research to the widest possible audience. They offer one of the most innovative and high quality publishing services currently available to societies. As a charitable organization, with a 'profit-for-purpose' mission, they share many of the goals and values of our society partners. They bring an ethical approach to their publishing and policies and pride themselves on our sense of fair play. These attributes, combined with an astute commercial awareness, confer a demonstrable business advantage in the current academic marketplace, where researchers, authors, and librarians feel increasingly disengaged from the process of disseminating research, particularly via the approaches of some commercial publishers.

The Egyptian Journal of Solids is the official publication of The Egyptian Materials Research Society (Eg-MRS). The journal accepts original research articles for publication in the field of solid state science and materials science from researches and scientists of all nationalities. Emphasis is placed on experimental behavior of condensed matter. In addition to regular papers, the journal will publish review articles that can either be submitted or solicited by the editorial board.

General areas of interest are the electric, magnetic, optical, thermal, mechanical and structural properties of solids; thermodynamic of condensed systems; electronic structure and defect properties; thin films, surfaces and interfaces; amorphous and nano-scale materials; phase transitions; preparation and structural characterization of new and advanced materials

management, negotiating, risk management, globalization, networking, and change management. Interdisciplinary papers are encouraged.

The Journal of Business Chemistry provides an international forum for researchers and practitioners to present their results.

The Institute of Business Administration at The University of Muenster's Department of Chemistry and Pharmacy was founded to improve and develop the interdisciplinary field of Business Chemistry. Following five years of basic research, including innovations in management and strategies for the chemical industry, this new journal serves as the next step of academic progress within the field of business chemistry. Our journal communicates research results in the field to broad audiences in the scientific and industrial communities. The first issue was published in May 2004; the January 2006 issue is now available in the issues section.

Journal Clinical Chemistry, issued monthly, is published by the American Association for Clinical Chemistry, Inc. The journal welcomes contributions, either experimental or theoretical, that concern basic materials or principles, analytical and molecular diagnostic techniques, instrumentation, data processing, statistical analyses of data, clinical investigations in which chemistry has played a major role, or laboratory

HighWire Press is a division of the Stanford University Libraries, which produces the online versions of high-impact, peer-reviewed journals and other scholarly content. Recipient of the 2003 ALPSP Award for "Service to Not-for-Profit Publishing", HighWire partners with influential scholarly societies, university presses and publishers to create a collection of the finest, fully searchable research and clinical literature online. Together, these partners produce 73 of the 200 most-frequently-cited journals publishing in science.

HighWire Press hosts the largest repository of free full-text life science articles in the world, with 1,323,257 free, full-text articles from 264 journals. Since 1995, with the launch of the Journal of Biological Chemistry (JBC), to the continuous online production of hundreds of prestigious journals, such as Science Magazine, the New England Journal of Medicine, PNAS and JAMA, HighWire has established an outstanding reputation for helping to disseminate primary scientific information on the Web.

The journal *Ceramics-Silikaty* accepts papers concerned with the following ranges of material science:

- Chemistry and physics of ceramics and glasses
- Theoretical principles of their engineering including computing methods
- Advanced technologies in the production of starting materials, glass, ceramics and cement based materials
- Properties and applications of modern materials
- Special analytical procedures
- Engineering ceramic including composites
- Glass and ceramics for electronics and optoelectronics
- High temperature superconducting materials
- Materials based on cement or other inorganic binders
- Materials for biological application
- Advanced inorganic glasses with special properties
- Fibrous materials Coatings and films based on inorganic non-metallic materials

## Chemistry Education Research and Practice

*Chemistry Education Research and Practice* (CERP) is a fully refereed electronic journal published by the Royal Society of Chemistry. It is formed by the amalgamation of University Chemistry Education, published by the Royal Society of Chemistry, and Chemistry Education Research and Practice, published previously from the University of Ioannina, and is the journal for teachers, researchers and other practitioners in chemical education.

*CERP* is an electronic only journal, and is accessible free of charge online, providing full text articles four times a year.

Chemistry Education Research and Practice (CERP) is the journal for teachers, researchers and other practitioners in chemical education.

It is published free of charge, electronically, four times a year and covers:

- research, and reviews of research in chemical education
- effective practice in the teaching of chemistry
- in depth analyses of issues of direct relevance to chemical education

To publish high quality papers in materials research: review papers, original papers, short communications, but also announcements and news. Topics should be of interest in the field of preservation research and should include studies in stability, environmental studies and condition assessment of cultural heritage, and studies of materials and procedures used for its conservation and preservation.

The journal aims at dissemination of information to researchers, conservators, preservation officers, and other interested audiences.

The reviewers are requested to consider the following:

- relevance of topic,
- scientific content and quality of innovation,
- adherence of the manuscript style to international standards, e.g. SI system of units.

The *Japan Society of Nuclear and Radiochemical Sciences (JNRS)* was founded on October 12, 1999 to revitalize studies on radiochemistry and related fields. It is the newest academic society on nuclear and radiochemistry. *Symposium on Radiochemistry* is an annual meeting on radiochemistry that has been held for more than 40 years in Japan and has contributed to progress of radiochemistry. The participants of the meeting played the key role for founding the Society. The scope of the society covers not only nuclear and radiochemistry but also many related fields, such as analytical chemistry, radiation chemistry, geochemistry, health physics, environmental science, material science, accelerator science, radiation biology, radiopharmacy

*Beilstein Journal of Organic Chemistry* is an Open Access, peer-reviewed online journal that will encompass all aspects of organic chemistry. Full research papers and preliminary communications (short reports) will be published in the journal.

The journal covers organic chemistry in its broadest sense, including: organic synthesis, organic reactions, natural products chemistry, supramolecular chemistry and chemical biology. *Beilstein Journal of Organic Chemistry* offers organic chemists a unique opportunity to publish their research rapidly in an Open Access medium that is freely available online to researchers worldwide. In doing so it not only offers authors uniquely wide visibility and high impact, but it also ensures that their work is part of the permanent, publicly available archive of science. Open Access does not compromise the high quality of the articles published. All manuscripts submitted to the journal are subject to rigorous peer review. Articles in *Beilstein Journal of Organic Chemistry* should be cited in the same way as articles in a traditional journal. However, because articles in this journal are not printed, they do not have page numbers. Instead, they have a unique article number

# MBCR's collection of on-line journals in molecular and cell biology and biochemistry

Last updated March 12, 1999

This is meant to be a complete, concise, one-click listing of as many online medical/biological journals as possible. Whether or not you yourself can access a journal from the list below depends on your local institution, and on the journal itself. Some can be accessed by anybody, others require an institutional subscription or membership in a journal service, or an individual subscription. Some give free web access to paper subscribers, while others require the payment of an additional fee for web access. Generally, individual subscriptions on line are available only to those who subscribe to the paper journals. If you already subscribe to the paper version of any journal, check there for subscriber-specific information.

Please let us know about any new on-line journals!

## Conclusion of the project

While searching the open access journals from google and yahoo search engines. It is noted that it is very difficult to find out the journals of chemistry. However where the directories of journals were searched it was easy to find out useful journals of chemistry.

I have searched so many e-journals on the internet, out of these I found many journals available in full text form, free of cost. The facility has been provided by the publishers to subscribe these journals in their e-mails and can have regular receiving without missing of issues, because these are programmed and customized according to the automatic online subscription, so that a user may enjoy reading and update their knowledge base.

By using the leading search engines, the result for the request comes in bulk and it is not easy to find the appropriate title of journal, title of article, name of publisher, place etc.

There is no specific gateway for finding the social science journals except the subject and titles are found scattered on the internet.

There are no standards for presenting the bibliographical details of the journals on the internet. In some journals editors, sub-editors, frequency, place etc. are not found.

Many e-journals were detected available full text in first round of search, but a few journals found missing in the second round of search, so that it is very difficult to rely on the sites.

It has been observed that information should be organized on the internet in a better way, so that accurate piece of information can be found timely. The search engines should eliminate the bulk list of search by using the latest IT search techniques.

A common gateway for e-journals is required to access journals by subject, country, title of article, name of author, name of publisher etc. like doaj.org, freefulltext.com

The publisher or the editors of the sites should provide complete bibliographical details on the site. And presentation of bibliographical details, a standard catalogue format should be followed.

The journal once published on the internet should be archived by some permanent repository, so that these can be accessed even after the original sites of the journals expires or stop their services.
