## CERTIFICATE OF ORIGINALITY

This is certify that the Project Report

entitled AN EVALUATION OF FREE-E-JOURNALS AVAILABLE  
ON WEB IN THE FIELD OF MEDICAL SCIENCES

Submitted to Indira Gandhi National University in partial fulfillment of the requirement for the award of **POST GRADUATE DIPLOMA IN LIBRARY AUTOMATION AND NETWORKING (PGDLAN)** is an original work carried out by Mr. Mr. S. SURESH.

The matter embodied in this project is a original work done by the student and has not been submitted whether to this University or to any other University/Institute for the fulfillment of the requirement of any course of study.

Signature of the Student

Name S. SURESH

Address 63, OM HOUSE  
SRI AUROBINDO MARG  
ADIGHINI, NEW DELHI.

Enrolment No. 051534080

Signature of the Guide

Name RK SHUKLA

Designation Librarian

Address Delhi College  
of Engineering  
Delhi - 110042

# Synopsis

## **Introduction:-**

### **Open access and the Developing world:-**

We are living in a unequal world. The developing world is not at all an easy place for conducting research. The financial constraints of subscribing to print copies of journals published by profit making companies and the advents of the internet have in part fuelled the cry for alternative business models. The emergence of e-journals has brought many changes and issues among the scholarly community, publishers, and libraies, as well as scholars themselves. When e-journals were first available to journal users, users found it hard to adapt their research habits to this new technology. After more than a decade, however, it seems that users have reached a mature stage of usage in which e-journals are recognized as essential tools in research activities, while publishers and libraies are struggling to find agreement over such issues as site licenses ownership and journal pricing.

What attracts our attention in this situation is that some for-profit publishers have evidently forgotten the primary good of scholarly publishing, namely the dissemination of scholarly work. The scholarly community of course, has not, which is why scholars continue to give up their rights as authors for their articles, and serve as referees.

One model proposes that authors (or their institutions or funding agencies) bear the cost of journals and readers get them at no cost (author -- pays open-access). The well known examples of author -- pays open access journals PloS Biology and PloS Medicine.

The projects output of the author's institutes will be greatly enhanced through the establishment of open access archives, show casing their academic publications. Open access

archives are set up using free software and there are many support organizations offering help if needed.

In India, the Indian institute of science was among the first to set up an institutional archive. Archiving already published research in interoperable institutional archives greatly benefits global science at almost no cost. This can be done without changing established publishing practices and offers enormous opportunities for scientific medical research in developing countries. The WHO Indian council of Medical Research, ministry of Science of and technology and the UGC should consider supporting the setting up of Open Access archives for medical research publications in India.

The National institutes of Health, USA and the Joint Information systems committee of the UK are trying to implement mandating of Open access archiving of publicly funded research in their respective countries. India should lead the way for the rest of the developing world.

Internet based electronic journals started to appear in the beginning of 1990. The E-Journals are appear periodically. Electronic journals are defined as any journal, magazines, e-zine, newsletter or types of e-serial publication which is available at the internet and can be accessed using different technologies such as www, Gopher, Ftp, Talent, E-mail or list serve. New journals have evolved based on the graphic capabilities of the Internet that are available only in electronic form, online subscription of journals is becoming very popular now a day. Many of the medical e-journals are freely available. In online subscription we can get access to the issue of journals as well as back volumes.

## EVALUATION METHODOLOGY OF E-JOURNALS

Search engines generate results in millions in which only a few are relevant medical sciences.

In such an environment is highly recommended that page must be evaluated. Medical scientists can use these pages for evaluation of e-journals. Generally will known as ASTAFS.

Authority	:-	Identify the author, and publisher.
Scope	:-	What subject covering by the website? Those who are contributors?
Treatment	:-	How much accuracy in the subject recently?
Arrangement	:-	How it was arranged on the website?
Format	:-	What is the format of a document?
Special feature	:-	If there is any specific feature associated with the document?

## **OBJECTIVES OF THE PROJECT:-**

The Project had been with the Objective to provide a list of FREE ELECTRONIC JOURNALS to enable the Medical Science professional & Medical science scientists to access the tremendous development of medical science people. So that they can implement a new treatment development aspects in their professional services and can take best diagnosis for the benefit of our Human society in the world.

The Free e-journals list will also helps in updating their personal knowledge and best standard of living in health for our human society to get the knowledge of health professionals all over the world, because of their dedication and trust to know the new development to access the knowledge easily. This list of information will be presented as a web page along with the hard Copy.

## **METHODOLOGY:-**

Various search engines like Google, Excite, Northern List, alta – vista, Lycos etc., will be used for searching the e-Journals in the field of medical sciences. After finding the titles of e-Journals they will be verify from the actual sites and their details like publishers, editors, periodicity and medium of on-line will be ascertained.

## **INPUT TO THE PROJECT:-**

By using suitable Hardware and software and with the help of different type of medical and other search engines free on-line available journals can be searched. A complete details of respective websites will be made available to enable the medical science professionals to the sites and consult the journals.

## **OUTPUT TO THE PROJECT:-**

The project will provide comprehensive lists of free electronic journals. These e-journals contain a very high degree of information exposure and nascent information and keep the medical libraries and medical related information professionals and medical related centers more acquainted with the latest advancement taking place in their respective field to keep medical scientists more abreast the latest developments taking place in their related subjects. These e-journals really open the doors for the recent research and development taking place in the field of medical sciences.

## **PROCESS LOGIC:-**

As the use of different search engines, these search engines produced different type of enormous results. The use of logic and actual verification of the sites and their contents is required in every case.

## **LIMITATIONS OF THE PROJECT:-**

The use of search terms and various indexing techniques by the different search engines. The comprehensive lists of all free on-line journals could not be extensively prepared because if it prepared extensively, the project will be so lengthy. Only English language journals will be covered.

## **TOOLS / PLATFORMS / LANGUAGES TO BE USED:-**

**Intel** Pentium -- IV, 2.4 GHZ PC

**Window** XP based Internet Explorer

**A** high speed of Internet connection with a speed of 144 kb/s

**Different** search engines.

**HTML** Language.

## **Reasons for proposing to use:-**

These are the basic components for the search.

# **Introduction**

## **Electronic Journals and open Access:-**

This is a selection of links to basic resources about electronic journals in the health sciences and about open access to health science information.

Electronic Journals: A Selected Resource Guide defines electronic journals: "... serial publications available in digital format. Some are distributed on CD-ROMs, some over the Internet. Of the internet-available ones, some are delivered over the World Wide Web, some by e-mail. Some are ASCII text, some are HTML WWW pages, some use proprietary formats such as Adobe's PDF (portable document format). Some have paper equivalents, some are purely electronic. Some are published in electronic form, some are digitally reformatted print journals. Some are free, some are available by subscription only. Some are peer-reviewed scholarly journals; many are not quality-controlled."

Some electronic journals are open access journals. Peter Suber has provided a brief definition of open access as literature that is "digital, online, free of charge, and free of most copyright and licensing restrictions" and discusses more details in his open access overview.

## INTRODUCTION

Internet is embraced as a cultural phenomenon and being celebrated as a revolutionary and universal business solution since 1990<sup>s</sup>. For long-established firms the Internet represented a way to revamp long standing marketing and strategic plans rapidly. According to Harvard Business school strategy Professor, Michael porter, the Internet created “artificial businesses competing by artificial means propped up by capital” which, at the time, was abundantly, if temporarily, available. The Internet’s overall leveling effect on business practices make it more difficult to cultivate a competitive advantage. Porter stressed that the Internet applications must be integrated into a firm’s existing strategy and structure in order to enhance organizational performance. With careful choice of coordinated Internet applications, companies can reduce cost, increase revenues and improve overall profitability. For health care organizations, the Internet raises additional competitive challenges and opportunities. The most notable of these is the growing importance of Healthcare “consumerism” which the Internet only serves to intensify.

Fifty-seven of America’s leading medicals scientific non-profit publishers announced in October that they have offered a proposal to Elias Zerhouni, M.D., director of the National Institutes of Health (NIH), that would allow the NIH to bring vast amounts of research findings to the public efficiently and at no cost.

In a joint letter to Dr. Zerhouni, the group detailed a plan that would allow the NIH to provide online access to articles on their journal websites siding the existing system of links from abstracts that are indexed on NIH's Medline. The transparent linking system would make it easier for the public to view more than 1 million research articles and would avert the need to create a new taxpayer-funded publishing infrastructure within the NIH.

The Public – private partnership being proposed by the non-profit publishers would fulfill the NIH's goal to provide complete public access to all NIH funded research. It also would allow seamless online access to a staggering amount of additional scientific and medical research, including one million free research articles from science, social sciences and the humanities, more than 15000 additional free articles each month, and a library of 1.7 million full text research articles dating to 1849.

Overnight and at no cost to taxpayers, this proposal will make it easy for the public to access vast amount of the most accurate scientific and medical information available," said Chris Lynch, vice President of publishing for the Massachusetts Medical Society, Which publishes the New England Journal of Medicine. "Essentially, what we are proposing is for the NIH to become the public's doorway into the universe of research that non-profit publishers already provide to the public everyday.

# Objectives

## **OBJECTIVES OF THE PROJECT:-**

The Project had been with the Objective to provide a list of FREE ELECTRONIC JOURNALS to enable the Medical Science professional & Medical science scientists to access the tremendous development of medical science people. So that they can implement a new treatment development aspects in their professional services and can take best diagnosis for the benefit of our Human society in the world.

The Free e-journals list will also helps in updating their personal knowledge and best standard of living in health for our human society to get the knowledge of health professionals all over the world, because of their dedication and trust to know the new development to access the knowledge easily. This list of information will be presented as a web page along with the hard Copy.

Mainly reducing the cost of journals and the benefit should be reached all the medical professionals.

# Methodology

**Methodology:**

**Target Population:** Life scientists and medical professionals who read life and medical science journals, especially High wire journals in either paper or e-journal format. (both users and non-users of e-journals).

Life scientists and medical professionals who are comfortable to use/ read online version of scientific journals. Presumably, this population is the representative of those who use online journals to retrieve articles regularly.

I have used the method with the help of Hardware and software and other search engines.

Like [www.a9.com](http://www.a9.com), [www.mamma.com](http://www.mamma.com), Etc..

# **Tools/platform /languages**

**Tools/ Languages/ platforms to be Used:**

Hardware : Intel Pentium IV, 2.4 GHZ PC

Window Xp based Internet Explorer

A High speed of Internet connection with a speed of 144 kb/s

**Different search Engines.**

(like [www.google.com](http://www.google.com), [www.a9.com](http://www.a9.com), [www.exite.com](http://www.exite.com), [www.Northernlight.com](http://www.Northernlight.com),

[www.altavista.com](http://www.altavista.com), [www.lycos.com](http://www.lycos.com).

HTML Language.

<http://www.worthington-biochem.com.8080>

[www.healthy.net.Architech.html](http://www.healthy.net.Architech.html)

[www.biome.ac.uk](http://www.biome.ac.uk)

[www.brisbio.ac.uk](http://www.brisbio.ac.uk)

<http://www.ncbi.nlm.gov/pubmed/>

[www.freemedicaljournals.com](http://www.freemedicaljournals.com)

[www.aslib.com/sigs/biosciences/index.html](http://www.aslib.com/sigs/biosciences/index.html)

**Input**

## INPUT:

In this project I have used some of the inputs like Hardware, Software, with the help of different search Engines like [www.google.com](http://www.google.com),  
[www.mama.com](http://www.mama.com).

[www.a9.com](http://www.a9.com),

[www.kartoo.com](http://www.kartoo.com),

[www.alltheweb.com](http://www.alltheweb.com), etc..

Softwares like Visuabasic 6.0 and MS Access.

Hardwares like Intel Pentium IV, 2.4 GHZ PC

Window XP Based Internet Explorer.

<http://www.worthington-biochem.com.8080>

[www.gcindia.com](http://www.gcindia.com)

[www.healthy.net.Architect.html](http://www.healthy.net.Architect.html)

[www.biome.ac.uk](http://www.biome.ac.uk)

[www.brisbio.ac.uk](http://www.brisbio.ac.uk)

[http:// www.ncbi.nlm.gov/pubmed](http://www.ncbi.nlm.gov/pubmed)

[www.freemedicaljournals.com](http://www.freemedicaljournals.com)

[www.aslib.com/sigs/biosciences/index.html](http://www.aslib.com/sigs/biosciences/index.html)

**Output**

## **OUTPUT of Medical E-Journals:-**

- 1) Easier to access -- no need to go to library
- 2) Price
- 3) Speed
- 4) Feedback

**Fewer restrictions, e.g. with respect to**

- The number of articles in an issue
- Their length
- Their presentation
- Electronic publication allows for mass customization of articles: there can be  
a one-paragraph abstract,  
a one-page executive summary,  
a four-page overview,  
a 20-page article,  
a 50-page appendix.
- All aimed at different levels of readers.

## **Broader Treatment:**

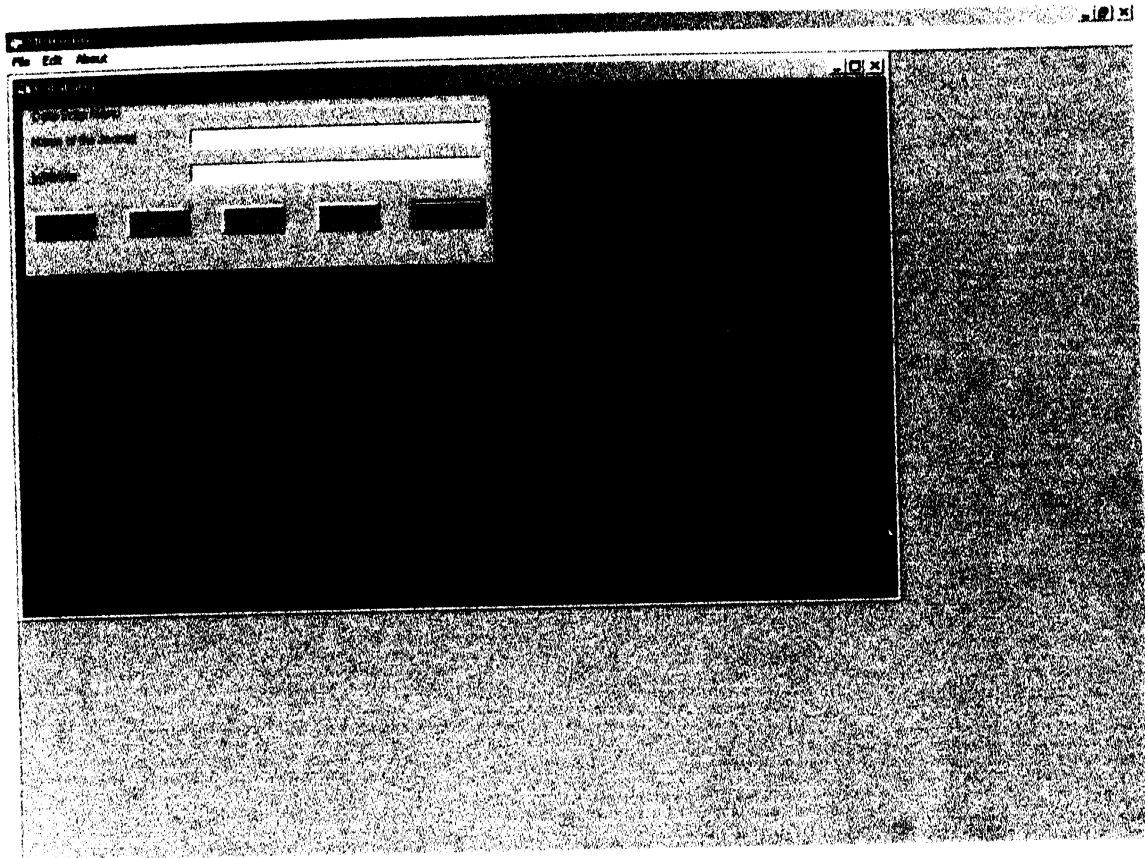

Graphics

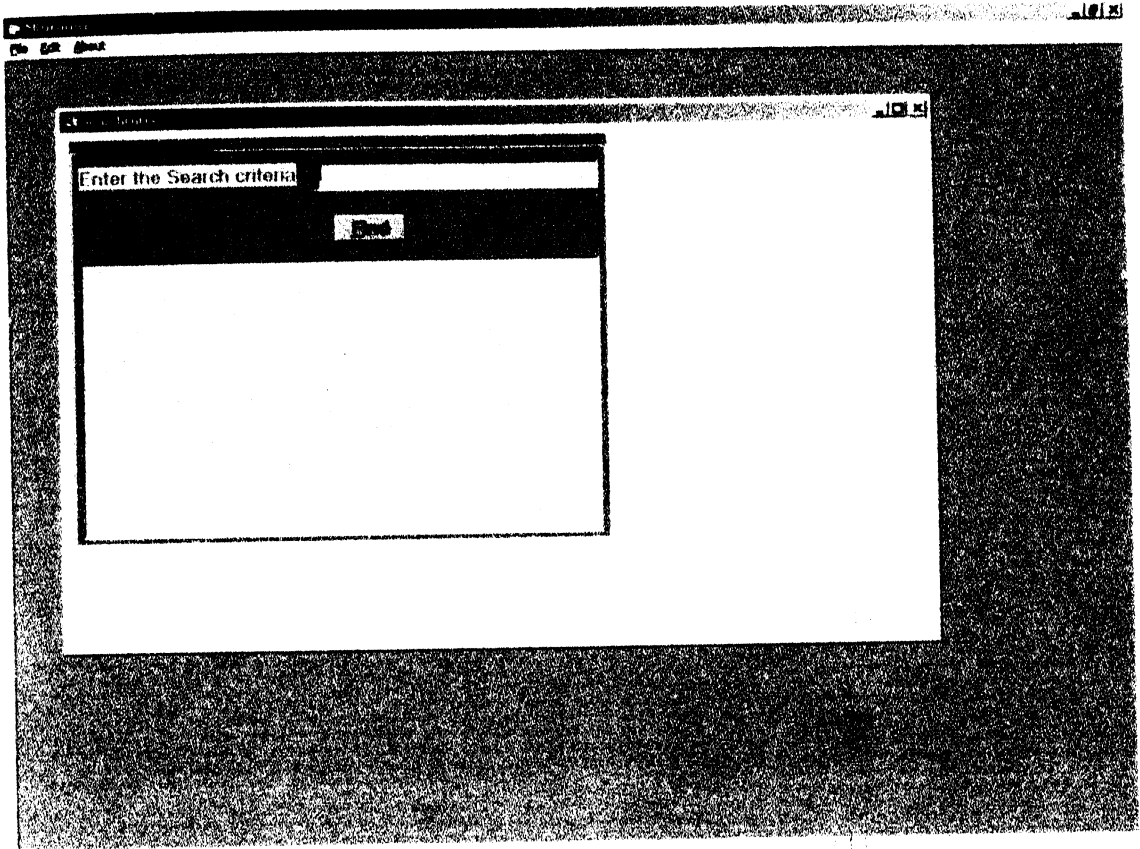

Audio

Video

Animated Graphics

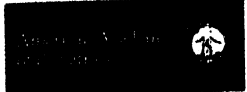

- Thus, "what we will have is not simply an electronic version of a paper journal, but an entirely new creature."
- Eliminates need for photocopying
- Easy to download
- Easier to extract information
- Skip to Actual Article Mentioned in Footnote
- Greater Number of Potential Readers
- Owners of e-journals can keep track of how often an article is requested by readers.
- Electronic journals do not take up space on library shelves
- The greatest advantage is that they facilitate true peer review.

# Evaluation

## EVALUATION

There are 1450 free medical e-journals are available on the web. Out of these, 705 e-journals are presently available till date and remaining journals are available freely at irregular intervals like after the date of publishing which may be in weeks, months and year(s). The medical site ([www.freemedicaljournals.com](http://www.freemedicaljournals.com)) is an extensive (400 plus), upto-date, linked listing of medical journals available electronically, organized by the subject categories, having alphabetical order in English and also categorized language wise. The site is dedicated to the promotion of free access to medical journals over the Internet. The subject area listing to alphabetical list is extensive and links to journals homepages; includes Broad-coverage journals (ex: JAMA, BMJ, NEJM), Nursing Journals and Books on medical writing; from Science. Komm.

This site also contains information geared toward patients. Use these pages to help your patients understand the effect aging has on thyroid disorders, osteoporosis, osteoarthritis, traveling and more. For Health care professionals looking to earn continuing education credits. ([Issuesinaging.com](http://Issuesinaging.com)) for high quality medical education and information.

Half of the listed Journals are going to be available on internet after one month, six months, one year and two year time limits.

### **Web Site Evaluation of Free Medical E-Journals:**

#### **Evaluation parameters:**

##### **a. Currency/Updating**

*How current is the site? Is there a creation date?*

Health and medical information needs to be current. All the 705 e-journals are currently accessible (full text) presently on the site. No creation date is mentioned. The information related to medicine, health, nursing, health, etc are current.

## **b. Recency**

*How often is it updated? Is there a revision date? Check revision date for currency.*

As per frequency of the journal, the data is updated. Revision depends upon the publishing date / frequency of the journal. Most of the journals are revised with currency of data.

## **c. Subject Listing of Journals**

Some of the Journals are sorted by subject wise:-

AIDS (27)	Medical Library (5)
Addiction (6)	Medical Physics (1)
Allergy (7)	Microbiology (39)
Anatomy (2)	Molecular Medicine (4)
Andrology (1)	Musculoskeletal Disorders (1)
Anesthesiology (15)	Nephrology (10)
Basic Science (99)	Neurology (38)
Biochemistry (7)	Neurosurgery (1)
Biology (21)	Nuclear Medicine (4)
Biomechanics (1)	Nursing (15)
Biomedical Engineering (6)	Nutrition (22)
Biomedicine (2)	Occupational Medicine (10)
Cardiac Surgery (1)	Odontology (5)
Cardiology (25)	Oncology (36)
Cardiovascular Diseases (14)	Ophthalmology (13)
Cardiovascular Surgery (1)	Optometry (5)
Chemistry (13)	Oral Diseases (1)
Clinical Medicine (3)	Orthodontics (1)
Critical Care (4)	Orthopedic Surgery (2)
Dentistry (24)	Orthopedics (9)
Dermatology (10)	Others (2)
Diagnostic Imaging (2)	Otolaryngology (6)
Emergency Medicine (11)	Pain Therapy (3)
Endocrinology (24)	Palliative Care (3)
Environmental Medicine (9)	Pathology (10)

Epidemiology (28)	Pediatric Surgery (1)
Ethics (9)	Pediatrics (43)
Evidence-Based Medicine (4)	Pharmacology (25)
Family Planning (4)	Pharmacy (36)
Family Practice (13)	Physical Therapy (9)
Forensic Medicine (2)	Physician Assistants (1)
Gastroenterology (27)	Physiology (16)
General Journals (180)	Plastic Surgery (1)
Genetics (18)	Pregnancy and Childbirth (1)
Geriatrics (8)	Primary Care (3)
Gestion (1)	Prosthetics (2)
Gynecology (22)	Psychiatry (28)
Hematology (17)	Psychology (10)
History of Medicine (6)	Psychosomatics (1)
Immunology (9)	Psychotherapy (1)
Infectious Diseases (33)	Public Health (77)
Informatics (7)	Pulmonary Medicine (17)
Insurance (1)	Radiology (19)
Intensive Care (6)	Rehabilitation (5)
Internal Medicine (6)	Reproductive Health (6)
Laboratory Medicine (4)	Rheumatology (12)
Legal Medicine (3)	Scientific Education (3)
Medical Education (4)	Sleep Medicine (2)
Therapeutics (1)	Sports Medicine (11)
Toxicology (9)	Surgery (21)
Transplantation (2)	Surgical Oncology (1)
Traumatology (3)	Urology (9)
Travel Medicine (1)	Veterinary Medicine (19)
Tropical Medicine (6)	

#### **d. Purpose/Audience**

*What is the purpose of the site? Does the site propose to educate, train, or inform?*

The site helps for the researchers, scholars, doctors, nurses, medical professionals for accessing the freely available full text articles on the web. They educate for the students, train the professionals and inform the active

professionals in the field for updating their knowledge, in turn helps for the developmental activity of society for safeguarding their health.

**e. Who is the audience?**

The Free medical journals site does not require any personal information about its visitors. If we ever e-mail to there, They will not give out our e-mail address to anyone else under any circumstances. They do not share any e-mail information with third parties unless explicit permission is given by us in response to a request from us. Visitors to the free medical journals site are anonymous. Documents available on the web can be accessed / browsed / searched by general public, adults, college students and any medical professionals.

**f. Is the purpose stated?**

To protect human beings from preventing diseases and keeping them in good health.

**g. Are there any "hidden agendas" of the site? Are the authors trying to promote a specific agenda?**

Authors are giving the full text articles on specific subject / area in these e-journals.

**h. Bias/Objectivity**

*Is the information objective? Do the authors cite references from authoritative sources?*

The articles are of objectivity and the references quoted are very much authoritative, since mostly original research articles are published and their related articles are cited for them.

**i. Are there any obvious biases?**

In most of the cases there seems to be no bias in the first instance. In some cases slight biasedness found towards the publications of European and American origin.

**j. Is the author on a crusade or trying to promote a specific idea or cause?**

The authors are promoting specific subject area in each journal. It can be important aspect of evaluating the publication.

**k. Is there advertising? Does this advertising overpower the site? Does it influence or overshadow the content?**

Advertising is available some of the articles sites and they do not overpower the site. It does not influence the content. In the free medical journals is a Bernd Sebastian Kamps website. [Director of the International Amedeo Literature service and founder of Flying publisher.] Advertising is not accepted.

**l. Author/Publisher/Authority**

*Does the author's name appear on the site? Is there an email address on the site for contacting him/her?*

Author's name appears along with the article in the contents, but not in the website. For contacting the authors, addresses are available. If the site is not published by an individual, what organization or agency publishes the site?

No journal in the list is published by individual. All are published through either associations or institutions or societies or government institutions and medical universities. Is the publisher a reputable organization? Yes. For example, Bernd Sebastian Kamps is the Director of the International Amedeo Literature service and the founder of Flying publisher. He is editor of Influenza Report 2006 and HIV Medicine 2005.

In 2005, Bernd Sebastian Kamps published the best reader Free Medical Information: Doctor=Publisher. In 2006, created the Amedeo Textbook Award. He will collect 1,000,000 create 50 awards of 20,000 each, and find the Physicians who will write and publish free medical textbooks.

Bernd Sebastian Kamps gives lectures about the current and future developments of free medical information. He speaks Spanish, Arabic, French, Portuguese, German, and Italian.

**m. Was the site produced by a government agency and medical agencies, well known organization, or by a university? - Yes.**

**n. Who maintains the site?**

These journals are maintained by the site Bernd Sebastian Kamps. (well known organization).

**o. Scope**

All the published articles are research oriented and they are in-depth.

Past issues also available in many sites like ex: Addiction. And Many Unpublished articles also mentioned in the particular subject sites.

**p. Accuracy/Relevance**

*Is it possible to determine the accuracy or relevance of the information? Is the information error free?*

The freely available full text articles are of relevance to the present context with more accurate and error free. All of the articles with publishers address, telephone no's are available.

**q. Does the author provide references?**

Yes. The authors provide references to the articles published.

**r. Design/Format/Structure**

*How usable is the site? Is it well organized?*

The sites are well organized with more useful and relevant information to medical professionals.

**s. How fast does the site load? Do images load in a reasonable time frame?**

It is loading the frames, pictures and images, but depends upon the access speed of the system.

**t. Can you search the site with keywords?**

It is possible to search with keywords.

**u. Is the site full of graphics with little textual information? Are there frames or features which may not load on all computers?**

No. Text is more with few illustrations. Normally all the frames are being loaded.

**v. Is there a table of contents or index for the site? Yes.**

**w. Uniqueness/Stability**

*How long has the site existed?*

Since 1995 onwards the site exists for accessing the free medical e-journals.

For example:

- 1995 HIV.NET
- 1998 AMEDEO
- 2000 free medical journals.
- 2001 Medicine on earth
- 2002 Free books for doctors
- 2003 HIV medicine
- 2003 Sars Reference
- 2004 Golden links4doctors
- 2005 Operation Opernball
- 2005 Free Medical Information-statistics.
- 2005 HIV Medicine 2005-statistics
- 2005 Senior Physicians
- 2006 Influenza Report
- 2006 Amedeo Challenge

**x. Has it remained stable during that time? Yes.**

**y. Is the information unique or can the information be found elsewhere?**

The published articles are of unique nature and related articles may be found elsewhere.

**z. Writing**

What is the quality of the writing on the site? The articles are of good quality.

Because it is properly organized, scholarly research articles.

Is there correct use of grammar and are words spelled correctly? Yes.

**a.a. Links**

*Does the site contain useful links? Yes. In every site contains the useful links.*

*How does the site choose the links?*

HTML linkages are available for opening the contents and text of the articles.

Are most of the links current or are there many "dead" links? Normally all links are available currently to access.

# Visual Basic

## **VISUAL BASIC :**

### **What is Visual Basic?**

Microsoft's Visual Basic product is defined as a programming system. Simply put this programming system is used to write Windows-based computer programs; it includes the Visual Basic language as well as a number of tools that help you write these programs. You don't use Visual Basic as a productivity tool; you use it to create customized productivity tools. By using visual Basic to create your own customized programs, you (or your company) are not bound by the limitations of a particular "off-the shelf" computer program; rather, you can design applications to meet your own specific needs. A good computer program should be flexible enough to fit the task at hand, rather than having to modify your needs to fit the program.

### **Forms**

A form is a container that hold all the other controls such as labels, text boxes, and pictures that make up part of a program's user interface. Most of your programs will use a number of forms.

### **Parts of a Form**

When you start a new standard EXE project, you are presented with the default Visual basic project, which normally includes a single standard form. Because this form is the place where you start work on your user interface, take a brief look at the different parts of it now. Visual Basic form contains all the elements you would expect to find as part of a window in a program. It contains a title bar, a control menu, and a set of Minimize, Maximize restore, and close buttons. Note that many of these elements, such a way that they are not visible at runtime.

## **Control Name**

Picture Box	Displays graphics. Can also serve as a container for other controls.
Label	Displays text that the users cannot edit.
TextBox	Displays text. Allows the users to enter and edit the text.
Frame	Serves as a container for other controls. Provides grouping of controls.
Command Button	Allows the users to initiate actions by clicking the button.
Check Box	Lets the users make a true /false choice.
Option Button	Lets the users choose one option from a group of items.
Combo Box	Lets the users choose from a list of items or enter a new value.
List Box	Lets the users choose from a list of items.
Horizontal Scroll Bar	Lets the users choose a ScrollBar value based on the position of the button in the bar.
Vertical Scroll Bar	Same as Horizontal ScrollBar.
Timer	Lets the program perform functions on a timed basis.
Drive List Box	Lets the users select a disk drive.
Directory List	Lets the users select a Box directory or folder.
Image	Similar to Picture Box control.
Data Control	Provides an interface between the program and a data source.

## **Introducing ADO**

ActiveX Data objects, or ADO, is the most recent method of data access that Microsoft has introduced. ADO is intended to replace DAO (Data Access objects), the original method of Visual Basic database access, and RDO (Remote Data Objects), a fast alternative to DAO. As with either of these object models, ADO provides several options for accessing your data. In this section, you briefly look at the steps and strategies necessary to set up a connection to data using ADO.

ADO provides the means by which your program code accesses a database. But how does ADO itself connect to a database? The answer is through an OLE DB provider. OLE DB is Microsoft's new lower-level database interface that provides access to many different kinds of data. There are OLE DB providers for both traditional databases such as SQL server as well as other sources like an e-mail server. The OLE DB provider exposes these databases to ADO, which in turn allows you to connect to the data in the two ways.

- **Data Controls:** A Data control is a custom control that handles communication with the database. You simply set a few properties and "bind" some other controls to the Data control to display information.
- **Object interface:** When you add a reference to ADO, a new set of objects becomes available to our own program. You can manipulate data directly from code without any controls or combine the use of objects with a data control.

### **Recordsets:**

Recordsets represent actual data from a database. A recordset has fields and values for those fields. Each set of field values that go together makes up a single record, and all these records together make up a recordset.

An easy way to visualize a recordset is as a spreadsheet or grid: Fields are like column names and the rows are the records. Recordsets are usually created as the result of a query on the database. You use recordsets in your program to retrieve and update data.

In ADO, a recordset is stored in a Recordset object. After a Recordset object is populated with data, you can perform the following operations on the data:

- Add new records
- Edit existing records
- Delete records
- Navigate the recordset (change the current record).

## **SQL:**

Structured query language (SQL) is a specialized set of programming commands that enable the developer (or end user) to do the following kinds of tasks:

- Retrieve data from one or more tables in one or more databases.
- Manipulate data in tables by inserting, deleting, or updating records.
- Obtain summary information about the data in tables, such as totals; record counts; and minimum, maximum, and average values.
- Create, modify, or delete tables in a database (Access databases only).
- Create or delete indexes for a table (Access databases only).

SQL statements enable the developer to perform functions in one line or a few lines of code that would take 50 or 100 lines of standard BASIC code to perform.

### **Parts of SQL Statement:**

- Parameter declarations: These are optional parameters that are passed to SQL Statement by the program.

- **The Manipulative statement:** This part of the statement tells the Query engine what kind of action to take, such as SELECT or DELETE.
- **Options declarations:** These declarations tell the Query engine about any filter conditions, data groupings, or sorts that apply to the data being processed. These include the WHERE, GROUP BY, and ORDER BY clauses.

**These parts are arranged as follows:**

- **Parameters declaration –** Section is where you define any parameters used in the SQL statement . Any values defined in the parameters declaration section are assigned before the SQL statement is executed.
- **Manipulative statement.**

Using these two parts of the SQL statement, we can create queries to perform a wide variety of tasks. Four of the manipulative clauses and their purposes.

**Parts of the Manipulative statement:-**

<b>Statement</b>	<b>Function</b>
DELETE FROM	Removes records from a table.
INSERT INTO	Adds a group of records to a table.
SELECT	Retrieves a group of records and places the records in a dynaset or table.
UPDATE	Sets the values of fields in a table.

# Pseudo code

## **Pseudo code**

### **Main Menu**

**Private Sub mnuAbout\_Click()**

frmAbout.Show

**End Sub**

**Private Sub mnuDataEntry\_Click()**

# Conclusion

## SUGGESTIONS AND CONCLUSIONS

Our main conclusion is that the optimal method of delivering journal articles in electronic form is a combination of payment by usage and subscription, with the option available to all users. Such an arrangement may be expected to evolve spontaneously through market forces. Attempts to plan a changeover would be difficult to implement because of transitional problems, particularly lack of knowledge of customer priorities and of price-sensitivity of demand. Both of these result from an inherently inefficient system isolated from the normal interaction of supply and demand. The process of change will be gradual and this is good, because, medical professionals, librarians, publishers, learned societies and writers can all learn and adapt.

It is evident that much concern among learned and professional societies is about loss of medical library subscription income with at least part of income becoming dependent on payment for *à la carte* use of electronic access. Perhaps there is too much pessimism here. The vicious circle of rising journal prices and diminishing subscriptions offers a poor alternative. By making information available in smaller portions to a much wider potential readership, electronic delivery may well increase total demand for it.

Electronic delivery provides an opportunity to enhance the service provided to members of learned societies. If a potential member's use of journal material is so rare that he/she would be satisfied with access as and when required

I have searched free e-journals on the internet I concentrated to the subject specific to medical journals text form, free of cost. The publishers of these journals gave facility to

subscribe these journals in their e-mails and can have regular receiving without missing of issues since these journals are programmed and customized according the automatic online subscription, so that a user may enjoy reading and updating their knowledge base.

While searching these journals, following Problems and difficulties were observed by me. By using the leading search engines the result for the request comes in bulk. There is no specific gateway for finding the medical science journals.

There are no standards for presenting the bibliographical details of the journals on the internet. In some journals, editors, sub editors, frequency, place etc. are not found. Many e-journals were found full text in few months before some of them are missing after few months so that it is very difficult to rely on the sites.

It has been observed that information should be organized on the internet in a better way, so that accurate piece of information can be found timely. The search engines should eliminate the bulk list of search by using the latest IT search techniques.

A Common gateway for e-journals is required to access or search journals by subjectwise and countywise. The journals once published on the internet should be archived by some permanent repository, so that these can be accessed even after the original sites of the journals expires or stop their services.

The listed journals of this project are regular in their periodicity and their articles are properly edited and published by the concerned authority with regular editors and publishers. While going through the text of these journals articles, it is noticed that highly

useful for the medical science professionals in providing/delivering the latest researches and developments taking place in the field of Medical science. So this highly useful information can be utilize to the students, teachers, scholars, all medical professionals and other user community for fulfill their information needs to their concerned knowledge areas.
