

VIOLA! VIT's Young Guns Make A Mark

It all began with three students of Vidyankar Institute of Technology (VIT) — Arvind Narayanan, George Abraham and Mohd. Nadeem, who took up 'VIOLA' (Vidylankar Online Applications) as their final year B.E. project. This project comprised multiple small projects like developing the official websites of three different institutes of the Vidyankar Group. The trio also conducted an extensive research of Data Centers across Mumbai before negotiating the best deal and setting up the dedicated web server for the various websites of Vidyankar. This initiative was given a huge fillip by the college management in terms of constant encour-

agement and financial support.

The heart of VIOLA is a portal which is a perfect blend of social networking and academics, popularly known as VidyankarLive. This portal has over 2,700 members and garners more than 1.5 lakhs hits per day. It provides a training platform for junior students to hone their technical skills on a live project, in addition to facilitating maximum automation within the institute.

VIOLA won the first place in the Project Demo and Poster Competition at the recently concluded International Conference on 'Technology Systems and Management', jointly held by SKVM's NMIMS, DJSCoE and MPSTME at Vile Parle, Mumbai.
