

NTPC to hire 1,000 engineers

The country's largest power producer NTPC will hire 10,000 engineers in the next 10 years as part of massive expansion plans. "We need to hire 1,000 engineers every year for the next ten years to meet manpower requirements in view of our plans to expand generation capacity," NTPC Director, Human Resources S.P Singh told PTI. At present, the power giant has about 25,000 employees, out of which half of the workforce are engineers. The company also aims to improve its Man-to-MW ratio — an indicator of the workforce's efficiency — to as much as 0.50, which would be the best achieved so far globally, by the end of the 12th Five-Year Plan (2012-17). — PTI
