

A Thesis Report

on

# FACE RECOGNITION SYSTEM USING MULTIPLE RECOGNIZER

*Under the partial fulfilment*

*Of the degree of*

*Master of Technology*

In

Software Engineering

**Submitted by:**

Vikas Singh

18/SE/2009

**Under the guidance of:**

Dr. Ruchika Malhotra

Assistant Professor

Computer Engg. Department

Department of Computer Engineering  
Delhi Technological University, Delhi

# CERTIFICATE

DELHI TECHNOLOGICAL UNIVERSITY  
BAWANA ROAD, DELHI-110042

**Date:** 29<sup>th</sup> June, 2011

This is to certify that thesis entitled ***FACE RECOGNITION SYSTEM USING MULTIPLE RECOGNISER*** which is submitted by **Vikas Singh** in partial fulfillment of the requirement for the award of **M.Tech.** degree in **Software Engineering** to **Delhi Technological University, Delhi** is a record of the candidate own work carried out by him under my supervision. The matter embodied in this thesis is original and has not been submitted for the award of any other degree.

## Under the Guidance of:

DR. RUCHIKA MALHOTRA  
ASSISTANT PROFESSOR  
DEPARTMENT OF COMPUTER ENGINEERING  
DELHI TECHNOLOGICAL UNIVERSITY  
BAWANA ROAD, DELHI-110042

# **DECLARATION**

I hereby declare that this submission is my own work and that, to the best of my knowledge and belief, it contains no material previously published or written by another person nor material which to a substantial extent has been accepted for the award of any other degree or diploma of the university or other institute of higher learning, except where due acknowledgment has been made in the text.

***Submitted By:***

*Vikas Singh*

*18/SE/2009*

## **ACKNOWLEDGEMENT**

It gives us a great sense of pleasure to present the report of the M. Tech Project undertaken during M. Tech. Final Year. We owe special debt of gratitude to **Dr. Ruchika Malhotra** Department of COE, **DTU Delhi** for her constant support and guidance throughout the course of our work. Her sincerity, thoroughness and perseverance have been a constant source of inspiration for me. It is only her cognizant efforts that our endeavours have seen light of the day.

I also take the opportunity to acknowledge the contribution of **Dr. Daya Gupta**, Head, Department of COE, **DTU Delhi** for her full support and assistance during the development of the project.

I will like to thank **Prof. P.B. Sharma, Vice Chancellor, Delhi Technological University** for taking the initiative of starting the course of Master of Technology in Software Engineering at Delhi Technological University in the year 2009.

I will like to thank my parents for their patience and support. Without them, I never would have made through the program.

I also do not like to miss the opportunity to acknowledge the contribution of all faculty members of the department for their kind assistance and cooperation during the development of our project. Last but not the least, we acknowledge our friends for their contribution in the completion of the project.

Finally, I am thankful to God for having granted me the skills and opportunities that made this work possible.

VIKAS SINGH

# **ABSTRACT**

Face recognition has been studied for many years and is expected to be widely used in daily identification systems, communication systems, public security systems, and in law enforcement systems.

Inspired from the human vision system, we combined the conventional learning algorithms and image processing algorithms with predefined rules to increase the intelligence of machine recognition systems. As the first step, face detection is implemented by an industrial image-based face detector combined with novel temporal differencing algorithms.

The face detection result, an industrial image-based classifier, temporal filtering and video context related rules are all combined for face recognition.

Simulation results show that, the proposed system, which is based on mixtures of subspaces, is effective for face detection. It can also be concluded that the subspace methods can be used effectively, in general object detection problems. Moreover, for colour images, observations show that, the proposed pre-processing step enhances the performance of the system.

Here, we are proposing an algorithm for the face recognition based on fusion of multiple recognizers namely Fisher's linear discriminant (FLD) and eigen-face so that we can overcome the limitation of single recognizer and improve the performance of the overall recognition system. The images of a human face lie in a complex subset of the image space that is unlikely to be modelled by a single linear sub-space; we use a mixture of linear subspaces to model the distribution of face and non-face patterns. This approach is used to overcome the drawback of the eigen-face approach by integrating Fisher's linear discriminant (FLD) criteria, while retaining the idea of the eigen-face in projecting faces from a high-dimension image space to a significantly lower-dimensional feature space.

## Table Of Contents

### Chapters:

1. Introduction .....	1.
1.1 Fundamental Issues in Face Recognition.....	3.
1.2 The Face Recognition System Design .....	4.
1.2.1). Data Acquisition.....	5.
1.2.2). Preprocessing.....	6.
1.2.3). Features Extraction.....	7.
1.2.4). Learning and Classification.....	8.
1.3 Motivation .....	8.
1.4 Goal.....	10.
1.5 Organization of the Thesis.....	11.
2. Literature review .....	12.
2.1 Objectives .....	12.
2.2 Review on the operation of biometric system.....	12.
2.2.1). Sensor Module.....	12.
2.2.2). Quality assessment and feature extraction module.....	13.
2.2.3). Database module.....	13.
2.2.4). Matching and decision module.....	13.
2.3 Overview of the face recognition system.....	14.
2.4 Parallel Technology available.....	16.
2.4.1 Face Recognition using Tensor Analysis .....	16.
2.4.2 A Fuzzy Clustering Approach for Face Recognition.....	19.
2.4.3 Face Recognition using Gabor Filters .....	21.
3. Research Methodology.....	24.
3.1 Introduction.....	24.
3.2 Eigenface Method .....	24.
3.3 FisherfaceMethod.....	30.
3.3.1 Fisher Linear Discriminant Analysis Method.....	32.
3.4 Proposed algorithm .....	35.
3.4.1). Algorithm.....	36.

3.4.2). Create Database.....	37
3.4.3). FLD Process .....	37
3.4.4). Recognition Process.....	38
3.4.5). Classification Process.....	39
4. Experimental Results.....	40
4.1 Optimal Number of Fisher’s Linear Discriminants .....	45
4.2 faces94 Database .....	45
5. Conclusions and Future Work.....	46
5.1). Conclusions.....	46
5.2). Future Work.....	48
6. References .....	51
