

DELHI TECHNOLOGICAL UNIVERSITY CERTIFICATE

This is to certify that the project report entitled “**PERFORMANCE EVALAUTION OF PERMANENT MAGNET BRUSHLESS DC MOTOR IN DIFFERENT MODES OF OPERATION**” being submitted by Archna Garg (01/C&I/2k10) in the partial fulfillment for the award of degree of Master of Technology in Control and Instrumentation (Electrical Engineering Department) of Delhi Technological University, Delhi is a record of bonafide work done by her under my guidance and supervision. It is also certified that this dissertation has not been submitted elsewhere for any other degree.

Prof. MADHUSUDAN SINGH
Department of Electrical Engineering
Delhi Technological University
Delhi
JUNE-2012

ACKNOWLEDGMENT

Working without proper guidance and expecting success is just like making castles in the air, so whenever one wants to start any work, requires guidance from experts. I take this opportunity to express my deepest gratitude to **Prof. Madhusudan Singh**, my Project Supervisor, for his constant motivation, invaluable guidance and encouragement in my pursuit of exploring, understanding and implementing the technical concepts related to this project. It was indeed a privilege and honor to work under his supervision.

I am also grateful to our respected Head of department **Prof. Narendra Kumar** and the entire **Electrical Engineering Department staff** for their kind cooperation in rendering the necessary resources for the successful completion of this project.

I owe my thanks to all my family members for their support and understanding through thick and thin, which gave me the inner strength to sail smoothly through this journey.

I want to express my sincere thanks to all those who helped me directly or indirectly in the progress and completion of the project.

Last but not the least, my heartfelt thanks to **the Almighty** for showing me the right path and being with me ALWAYS!!

Archna Garg

CONTENTS

Certificate.....	(i)
Acknowledgement.....	(ii)
Contents.....	(iii)-(vi)
List of Figures.....	(vii)
List of Tables.....	(ix)
Abstract.....	(x)

CHAPTER I INTRODUCTION.....1-11

1.0 General

1.1 DC and AC Motors and their trend

1.2 Permanent Magnet Motors' Description

1.2.1 Classification of Permanent Magnet Motors

1.2.1.1 Based on the direction of field

1.2.1.2 Based on the position of Permanent Magnet

1.2.1.3 Based on the position of Rotor

1.2.1.4 Based on the shape of back-emf

1.2.1.5 Based on the saliency of Permanent Magnet

1.2.2 Property of Permanent Magnet

1.2.3 Advantages over Brushed DC motors

1.2.4 PMBLDC motor advantages

1.3 Objective of the thesis

1.4 Outline of the thesis

1.5 Conclusion

CHAPTER II LITERATURE REVIEW.....12-25

2.0 General

2.1 Literature Review

2.1.1 Literature review on PMSM

2.1.2 Literature review on BLDC

2.2 Conclusion

**CHAPTER III MATHEMATICAL MODELING of PMBLDCM AND MATLAB
SIMULATION.....26-51**

3.0 General

3.1 Modeling of supply to PMBLDC

3.1.1 AC to DC Diode Bridge Rectifier

3.1.2 Boost Regulator

3.1.3 Inverter Unit

3.1.3.1 Three Phase Inverter

3.2 Mathematical Modeling of Permanent Magnet BLDC Motor

3.2.1 Three Phase Stator Equation

3.2.2 Mechanical Equations of PMBLDC

3.2.3 Relation between Electrical and Mechanical System

3.3 MATLAB Model of Permanent Magnet BLDC Motor

3.3.1 Sensor Based operation of PMBLDCM

3.3.1.1 Hall sensor and speed encoder based

3.3.1.1.1 PMBLDCM in open loop mode

3.3.1.1.2 PMBLDCM in Speed Control Mode

3.3.1.1.3 PMBLDCM in Speed and Current Control Mode

3.3.1.2 Speed Sensor based operation

3.3.1.2.1 PMBLDCM in Speed control mode

3.3.1.2.2 PMBLDCM in Speed and current control mode

3.3.2 Sensor-less operation of PMBLDCM

3.3.2.1 Back-Emf and Speed Controller based Operation of PMBLDCM

3.3.2.1.1 PMBLDCM in Speed control mode using 120 degree commutation

3.3.2.1.2 PMBLDCM in Speed control mode using 180 degree commutation

3.3.2.2 PMBLDCM in Speed and Current control mode

3.3.3 Fuzzy Logic Controller based speed and current control of PMBLDCM using position/speed sensor

3.4 Conclusion

CHAPTER IV SIMULATION RESULTS AND ANALYSIS.....52-73

4.0 General

4.1 Simulation results

4.2 Sensor Based Operation of PMBLDCM

4.2.1 Performance of PMBLDCM with Hall Sensor and Speed/Position encoder

4.2.1.1 Simulation result of PMBLDCM in open loop mode

4.2.1.2	Simulation result of PMBLDCM in speed control mode
4.2.1.3	Simulation result of PMBLDCM in speed and current control mode
4.2.2	Performance of PMBLDCM with Speed/Position Sensor only
4.2.2.1	Simulation result of PMBLDCM in Speed control mode
4.2.2.2	Simulation result of PMBLDCM in Speed and current control mode
4.2.2.3	Simulation result of PMBLDCM in Speed and current control mode (At low speed)
4.3	Sensorless Operation of PMBLDCM
4.3.1	Back-Emf and Speed Controller based Operation of PMBLDCM
4.3.1.1	Simulation result of PMBLDCM in Speed control mode with 120 degree commutation
4.3.1.2	Simulation result of PMBLDCM in Speed control mode with 180 degree commutation
4.3.2	Simulation result of PMBLDCM in Speed and Current Control Mode
4.4	Fuzzy Logic Controller based speed and current control of PMBLDCM using Speed sensor.

CHAPTER V MAIN CONCLUSION AND FUTURE SCOPE OF WORK.....74-75

5.0. Main Conclusion

5.1 Future scope of wok

ABSTRACT

The project work involves the performance evaluation of the Permanent Magnet Brushless DC Motor in different modes of operation. The Controlled electric motors play a vital role as the heart of the industrial automation. Therefore, the performance of the automated industry largely depends on the high performance motion control system. The performance is defined in terms of accuracy, smooth operation and also the simplicity of controlling scheme. In this work, the PMBLDC motor is operated in open loop mode and closed loop mode and the performance in both modes have been analyzed is observed and evaluated. Though, the open loop systems are simple in layout, less complex and thus economical too but closed loop systems are composed of a feedback mechanism, so they clear out the errors between input and output signals, and hence offer more accurate operation. In the present analysis the different schemes with the closed loop mode of operation are described, simulated in MATLAB/Simulink and their relative merits and limitation have been analyzed in detail. There is a further classification in terms of controlled parameters. Some schemes are modeled and simulated for only the speed control of the PMBLDC motor and some are modeled and simulated for the speed as well as current control. Then there is another classification of the mode based on the thing whether the use of mechanical sensors has been made or not. In some models, sensors are used while sensorless scheme has also been modeled and simulated. For the satisfactory performance of any drive, it is desirable during the operation at specified condition, the ratings are not exceeded. Also the smooth and efficient operation, fewer harmonic in current and minimum torque ripples are desirable. The simulated results are analyzed to evaluate the harmonic content of the drive current under various operating conditions and also the torque ripple under sudden application of load, sudden change in reference speed etc. The mathematical modeling of the power and control circuit for drive is described and MATLAB models have been simulation is done in MATLAB/Simulink version 7.9.0.529.
