

# **ON-TO-METHODOLOGY**

## **Ontology Development Methodology**

A Dissertation submitted in partial fulfillment of the requirement for the  
award of degree of

**MASTER OF TECHNOLOGY**

**IN**

**SOFTWARE ENGINEERING**

By

**MAGENDRA SINGH**

**College Roll No. - 08/SE/2010**

Under the esteemed guidance of

**Dr. DAYA GUPTA**

**Department of Computer Engineering**

**Delhi Technological University**

**2011-2012**

## CERTIFICATE

**DELHI TECHNOLOGICAL UNIVERSITY**

BAWANA ROAD, DELHI – 110042

Date: \_\_\_\_\_

This is to certify that dissertation entitled “**On-to-Methodology: Ontology Development Methodology**” has been completed by Magendra Singh in partial fulfillment of the requirement of major project of **Master of Technology in Software Engineering**.

This is a record of his work carried out by him under my supervision and support during the academic session 2011 -2012.

**Dr. DAYA GUPTA**

**Prof., HOD & PROJECT GUIDE**

(Dept. of Computer Engineering)

**DELHI TECHNOLOGICAL UNIVERSITY**

BAWANA ROAD, DELHI – 110042

## ACKNOWLEDGEMENT

---

---

It is distinct pleasure to express my deep sense of gratitude and indebtedness to my learned supervisor **Dr. Daya Gupta, HOD, Department of Computer Engineering, Delhi Technological University**, for her invaluable guidance, encouragement and patient reviews. Her continuous inspiration only has made me complete this dissertation. She kept on boosting me time to time for putting an extra ounce of effort to realize this work.

I would also like to take this opportunity to present my sincere regards to my teacher Dr. Ruchika Malhotra, for encouragement and perpetual motivation and other faculty members of Computer Engineering Department for providing me unconditional and anytime access to the resources and guidance. I would like to thank my friends for their unconditional support and motivation during this work.

Finally, I would thank my parents who bless me & always have been there for me.

**(MAGENDRA SINGH)**  
**Master of Technology**  
**(Software Engineering)**  
**Dept. of Computer Engineering**

## ABSTRACT

For about a decade, ontologies have been known in computer science as explicit specifications of shared conceptualizations. Researchers have written much about the potential benefits of using them, and most of us regard ontologies as central building blocks of the Semantic Web and other semantic systems. There is much work already existent on their definitions, construction and development and their applications. All these literature define the set of activities that concern the ontology development process, the ontology lifecycle, the principles, methods and methodologies for building ontologies and the tool suites and languages that support them.

The construction of ontology can allow users or agents of software/service to arrive at consistent views about organization structure of information with same semantics. However, since domains differ in principles, theories and techniques underlying them, there is no existing methodology that could work as the standard method for ontology construction at the present time.

Unfortunately, still not much quality ontologies have been developed. This implies that the Semantic Web community has yet to build practically useful ontologies for a lot of relevant domains in order to make the Semantic Web a reality. Indeed, several social and technical issues exist that cause problems in development of ontologies.

In this work we provide an overview of what ontology is, describing the current trends, issues and problems in constructing them. We also propose an ontology development methodology *On-to-Methodology* that could be used as a standard model for ontology development tasks across various domains. We have automated the development process by implementing a tool for Ontology design process. We illustrate our methodology by developing Ontology of Bikes. We then compare our methodology with other existing ontology development methodologies.
