

Root enhancement in *Chlorophytum borivilianum* using solid and liquid culture media

A Major Project dissertation submitted

In partial fulfillment of the requirement for the degree of

Master of Technology

In

Industrial Biotechnology (2013-15)

Submitted by

Monika

(2K13/IBT/09)

Delhi Technological University, Delhi, India

Under the supervision of

Dr. Navneeta Bharadvaja

Department of Biotechnology
Delhi Technological University
(Formerly Delhi College of Engineering)
Shahbad Daulatpur, Main Bawana, Delhi-110042, INDIA

CERTIFICATE

This is to certify that the M. Tech. dissertation entitled “**Root enhancement in *Chlorophytum borivilianum* using solid and liquid culture media**”, submitted by **Monika (2K13/IBT/09)** in partial fulfillment of the requirement for the award of the degree of **Master of technology in Industrial Biotechnology**, Delhi Technological University (Formerly Delhi College of Engineering, University of Delhi), is an authentic record of the candidate’s own work carried out by her under my guidance.

The information and data enclosed in this dissertation is original and has not been submitted elsewhere for honoring of any other degree.

Date:

Place: Delhi

Dr. Navneeta Bharadvaja

Assistant Professor

Department of Bio-Technology

Delhi Technological University, Delhi.

DECLARATION

I hereby declare that the project work entitled “**Root enhancement in *Chlorophytum borivilianum* using solid and liquid culture media**”, to submitted DTU, Delhi, is a record of an original work done by me under the guidance of Dr. Navneeta Bharadvaja, project guide, Assistant Professor, Delhi Technological University. This project work is submitted in the partial fulfillment of the requirements for the degree of Master of Technology in Industrial Biotechnology. The results embodied in this report have not been submitted to any other University or Institute for the award of any degree or diploma.

Delhi Technological University

Delhi.

ACKNOWLEDGEMENT

I owe a great many thanks to a great many people who helped me during this project.

This thesis was made possible due to the masterly guidance of our mentor Dr. Navneeta Bharadvaja, who has the attitude and the substance of a genius: she continually and convincingly conveyed a spirit of adventure in regard to research and scholarship, and an excitement in regard to teaching. Without her guidance and persistent help this dissertation would not have been possible. We are grateful to her being very kind and patient while suggesting us the outlines of this project and correcting our doubts, for her constant supervision and support in completing the project.

We owe a debt of deepest gratitude to our Head of the Department, Biotechnology, Professor D. Kumar for providing us the necessary opportunities for the completion of our project.

We are indeed immensely grateful to Nupur Jauhari, PhD Scholar and CB Singh, Assistant Technician, whose contribution in stimulating suggestion helped us to coordinate the project and who truly provided us with the possibility to complete this project.

Words are inadequate in offering my thanks to the entire faculty for their encouragement and cooperation in carrying out the project work.

Monika
