

**“SEISMIC ANALYSIS OF REGULAR AND  
IRREGULAR RC BUILDING FRAMES”**

**A Major Project Thesis**

**Submission in Partial Fulfillment of the  
requirements for award of the Degree of**

**MASTER OF TECHNOLOGY IN STRUCTURAL ENGINEERING**

**Submitted By**

**SANJEEV ARORA**

**ROLL NO: 2K14/STE/14**

**Under the Guidance of**

**DR.NIRENDRA DEV**

Professor & Head of Department

Department of civil Engineering

Delhi Technological University

Delhi-110042

**(2014-2016)**

## **CERTIFICATE**

This is to certify that the project entitled “**SEISMIC ANALYSIS OF REGULAR AND IRREGULAR RC BUILDING FRAMES**” is a record of bonafide dissertation work carried out by me, Sanjeev Arora, student of Master of Technology in civil (Structure) Engineering from Delhi technological university, Delhi 2014-2016 towards the partial fulfillment of the requirements of the award of degree of Master of Technology in Structural Engineering.

**Sanjeev Arora**

Roll no: 2K14-STE-14

M-tech 4<sup>th</sup> Semester

Structural Engineering

Department of Civil Engineering

Delhi Technological University

Delhi- 110042

This is to certify that the above statement laid by the candidates is correct to best of our knowledge.

Date:

**DR.NIRENDRA DEV**

Professor & Head of Department

Department of civil Engineering

Delhi Technological University

## **ACKNOWLEDGEMENT**

Any accomplishment requires the efforts of many people and this work is no exception. I appreciate the contribution and support, which various individuals have provided for the successful completion of this study. It may not be possible to mention all by name but the following were singled out for their exception help.

It is with immense pleasure that I acknowledge my gratitude to Dr. Nirendra Dev (Professor & Head of Department) Delhi Technological University for their comments and suggestions in this research. His immense generosity and affection bestowed on us goes beyond his formal obligation as guide.

My special thanks to my parents who have given me strength, love, care to carry out this course successfully.

**Sanjeev Arora**

## List of Symbol

$K_i$  = Stiffness of  $i^{\text{th}}$  Storey

$W_i$  = Seismic weight of floor  $i$ ,

$F_i$  = Design lateral forces at the floor  $i$  due to all modes considered

$EI$  = Rigidity of Section

$V_b$  = Design base shear calculated using the approximate fundamental  
Period  $T$ ,

$V_B$  = Design seismic base shear

## **ABSTRACT**

Several buildings in the current scenario have irregular configurations both in plan and elevation. This in future may subject to overwhelming earthquakes. In case, it is necessary to find the performance of the structures to withstand against disaster for both new and existing one. Structures experience lateral deflections under earthquake forces. Magnitude of these lateral deflections is related to many variables such as structural system, mass of the structure and mechanical properties of the structural materials. Reinforced concrete multi-storied buildings are very complex to model as structural systems for analysis. The current version of the IS: 1893 (part I) -2002 requires that practically all multistoried buildings be analyzed as three-dimensional systems. This is due to the irregularities in plan or elevation or in both. The thesis discusses the performance estimation of RC (Reinforced Concrete) Structures with irregularity. Structural irregularities are significant factors which decrease the seismic performance of the structures. The study as a whole makes an effort to evaluate the effect of vertical and plan irregularity on RC buildings, in terms of dynamic characteristics and the influencing parameters which can regulate the effect on Story Displacement, Drifts of adjacent stories, Excessive Torsion, Base Shear, etc.
