

CERTIFICATE

It is certified that the work presented in this dissertation entitled “**Genetic algorithm based ECG signal De-noising using EEMD and Fuzzy Thresholding**”, in partial fulfillment of the requirement for the award of the degree of **Master of Technology in Signal Processing and Digital Design** submitted by **Snekha (Roll No.2K12/SPD/20)** to the Department of **Electronics and Communication Engineering**, is a record of the student’s work carried out under my supervision and guidance.

The work embodied in this dissertation has not been submitted in any Institute/University for the award of any other degree to the best of my knowledge.

(RAJESH BIROK)

Associate Professor
Electronics and Communication Engineering

ACKNOWLEDGEMENT

The writing of this dissertation has been one of the most significant academic challenges I have ever had to face. I express my gratitude to my project guide **Sh. Rajesh Birok, Associate Professor, ECE Dept.,** Delhi Technological University, for the valuable support and guidance he provided in making this project report. It is my pleasure to record my sincere thanks to my respected guide for his constructive criticism and insight without which the project would not have shaped as it has.

I would also like to thank **Prof. Rajiv Kapoor, HOD, ECE Dept.,** Delhi Technological University, for his useful insights and guidance towards the project. His suggestion and advice proved very valuable throughout. I humbly extend my words of gratitude to other faculty members of this department for providing their valuable help and time whenever it was required. I am thankful to all teaching or non-teaching staff of DTU and my fellows, who have helped me in the completion of this report.

ABSTRACT

ElectroCardioGram (ECG) signal records electrical conduction activity of heart. These are very small signals in strength with narrow bandwidth of 0.05-120 Hz. Physicians especially cardiologist use these signals for diagnosis of the heart's condition or heart diseases. ECG signal is contaminated with various artifacts such as Power Line Interference (PLI), Patient–electrode motion artifacts, Electrode-pop or contact noise, and Baseline Wandering and ElectroMyoGraphic (EMG) noise during acquisition. Analysis of ECG signals becomes difficult to inspect the cardiac activity in the presence of such unwanted signals. So, de-noising of ECG signal is extremely important to prevent misinterpretation of patient's cardiac activity.

Various method are available for de-noising the ECG signal such as Hybrid technique, Empirical Mode Decomposition, Un-decimated Wavelet Transform, Hilbert-Hung Transform, Adaptive Filtering, FIR Filtering, Morphological Filtering, Noise Invalidation Techniques, Non-Local Means Technique and S-Transform etc. All these techniques have some limitations such as mode mixing problem, oscillation in the reconstructed signals, reduced amplitude of the ECG signal and problem of degeneracy etc.

To overcome the above mentioned limitations, a new technique is proposed for de-noising of ECG signal based on Genetic Algorithm and EEMD with the help of Fuzzy Thresholding. EEMD methods are used to decompose the electrocardiogram signal into true Intrinsic Mode Functions (IMFs). Then the IMFs which are ruled by noise are automatically determined using Fuzzy Thresholding and then filtered using Genetic Particle Algorithms to remove the noise. Use of Genetic Particle Filter mitigates the sample degeneracy of Particle Filter (PF). EEMD is used in this thesis instead of EMD because it solves the EMD mode mixing problem. EEMD represents a major improvement with great versatility and robustness in noisy ECG signal filtering.

Keywords: ECG de-noising, Genetic Particle filter, Ensemble Empirical Mode Decomposition, Fuzzy Thresholding and SNR

CONTENTS

CERTIFICATE	ii
ACKNOWLEDGEMENT	iii
ABSTRACT	iv
CONTENTS	v
LIST OF FIGURES	vii
LIST OF TABLES	xiii
LIST OF ABBREVIATIONS USED	xiv

Chapter 1 INTRODUCTION

1.1 Introduction.....	1
1.2 Methodology.....	4
1.3 Objectives of this dissertation.....	4
1.4 Dissection of dissertation.....	5
1.5 Summary.....	5

Chapter 2 LITERATURE REVIEW

2.1 Introduction.....	6
2.2 Historical perspective of De-noising of ECG signal.....	6
2.3 Development history of MATLAB and its features.....	6
2.4 Literature Survey on De-noising of ECG signal.....	8
2.4 Summary	14

Chapter 3 BRIEF DISCUSSION ON BASIC CONCEPTS

3.1 Introduction.....	19
3.2 Hilbert-Huang Transform	19
3.3 EMD.....	20
3.4 EEMD.....	22
3.5 Genetic Particle Filter.....	23
3.6 Fuzzy Thresholding.....	27
3.7 Summary.....	29

Chapter 4 PROPOSED APPROACH

4.1 Introduction..... 30
4.2 Flow chart diagram..... 30
4.3 Algorithm for proposed method..... 31
4.4 Implementation..... 33
4.5 Summary..... 35

Chapter 5 RESULTS AND DISCUSSION

5.1 Preview.....36
5.2 Result of proposed approach..... 36
5.3 Comparison with other methods..... 61
5.4 Discussion..... 64

Chapter 6 CONCLUSION AND FUTURE WORK

6.1 Conclusion..... 65
6.2 Future Work..... 66
