

A  
Dissertation  
On

**BINARIZATION TECHNIQUE FOR THE DEGRADED DOCUMENT IMAGES  
AND INSCRIPTION IMAGES**

Submitted in partial fulfillment of the requirement for  
The award of Degree of

**MASTER OF TECHNOLOGY  
(SIGNAL PROCESSING AND DIGITAL DESIGN)**

SUBMITTED BY

**HEMU DOBHAL**

College Roll no:2k12/spd/08

Under the guidance of

**DR S INDU**

(ASSOCIATE PROFESSOR)

Dept.of Electronics & Communication

Delhi Technological University

**DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING**

**DELHI TECHNOLOGICAL UNIVERSITY**

**2012-2014**

# CERTIFICATE

It is certified that **Ms.Hemu Dobhal** Roll No. **2k12/spd/08**, student of **M.Tech. Signal Processing and Digital Design**, Department of Electronics and communication Engineering, Delhi Technological University, has submitted the dissertation entitled **“Binarization Technique for Degraded Document and inscription Images”** under my guidance towards partial fulfilment of the requirements for the award of the degree of Master of Technology (SPDD).

The dissertation is a bonafide work record of project work carried out by her under my guidance and supervision. Her work is found to be outstanding and his discipline impeccable during the course of the project.

I wish her success in all her endeavors

**Dr. S.Indu**

**Associate Professor**

Department of Electronics and communication Engineering  
Delhi Technological University

## ACKNOWLEDGMENT

The completion of any project brings with it a sense of satisfaction, but it is never complete without thanking those people who made it possible and whom constant support has crowned my efforts with success.

One cannot even imagine the power of the force that guides us all and neither can we succeed without acknowledging it. My deepest gratitude to **Almighty God** for holding my hands and guiding me throughout my lives.

I would like to thank my beloved parents, who always give me strong inspirations, moral supports, and helpful suggestions. Without them, my study career would never have begun. It is only because of them, my life has always been full of abundant blessing.

I would like to devote my gratitude and thanks to my guide **Dr. S.Indu, Associate Professor, Department of Electronics and communication Engineering, Delhi Technological University, Delhi** for her valuable guidance, constant encouragement and helpful discussions throughout the course of this work. Obviously, the progress I had now will be uncertain without her guidance.

I would also like to thank **Prof. Rajiv Kapoor, H.O.D. Electronics and communication Engineering Department, Delhi Technological University, Delhi** for providing me better facilities and constant encouragement.

At last but not least I would like to express my vote of thanks to my friends for their support and encouragement.

**HEMU DOBHAL**

**2k12/SPD/08**

## ABSTRACT

Over a decade, text extraction of document has been a subject of interest for the research, but a very few works have been done in digitizing inscription images of historical monuments.

For unclear and complex archaeological inscription images, there is no sharp distinction between foreground and background. There are several problems in the text of inscription images, such problems are like there is low contrast between text and background thus the use of previously available methods is unsuitable. For the regions having high edge density and strength simple edge-based approaches are also considered useful. This edge-based method gives good results if background is not complex, but for the inscription images background is complex, thus this method cannot be used directly.

Badly degraded images which are having high inter/intra-variation between the background and the foreground text, the segmentation of the text becomes a big challenge.

This thesis proposes a novel document image binarization technique for the monument inscription that earlier was used for the binarization of degraded document images. The proposed method is basically an adaptive image binarization technique. In this first an adaptive contrast map is constructed for the input inscription image. The contrast map is then binarized and then combined with Canny's edge map to identify the text stroke edge pixels. Local threshold that is estimated on the intensities of detected text stroke edge pixels within a local window, is further applied for the document text segmentation. The proposed method is very simple, robust and it involves minimum parameter tuning.

It has been applied on different monuments inscription images and has given good results.

## **Organizatin of Thesis**

**Chapter 1:-**The first chapter gives the brief introduction of the proposed method and its related problems.

**Chapter 2:-**The second chapter gives briefly reviews the literature,related and the previous work done.

**Chpater 3:-**The third chapter give the detailed description of the techniques used and the motivation for the proposed method.

**Chapter 4:-**The fourth chapter gives the detailed explanation of the proposed method .

**Chapter 5:-**The chapter is about the experiment and discussion.

**Chapter 6:-**The chapter seven discusses the results obtained after applying the proposed method.

**Chapter 7:-**Finally in this chapter thesis is concluded with the future scope.
