

A
Dissertation
On
WATERMARKING SCHEME FOR MULTIPLE IMAGES

Submitted in partial fulfillment of the requirement
For the award of degree of

Master of Technology
In
Signal Processing and Digital Design

Submitted by

ASWATHI P

Roll no:2k11/spd/07

Under the esteemed guidance of

Dr.Nidhi Goel

(Assistant Professor)

Department of Electronics and Communication Engineering

DELHI TECHNOLOGICAL UNIVERSITY

July 2013

DECLARATION BY THE CANDIDATE

July 2013

Date: _____

I hereby declare that the work presented in this dissertation entitled “**WATERMARKING SCHEME FOR MULTIPLE IMAGES**” has been carried out by me under the guidance of **Dr.Nidhi Goel**, Assistant Professor, Department of Electronics & Communication Engineering, Delhi Technological University, Delhi and hereby submitted for the partial fulfillment for the award of degree of Master of Technology in Signal Processing & Digital Design at Electronics & Communication Department, Delhi Technological University, Delhi.

I further undertake that the work embodied in this major project has not been submitted for the award of any other degree elsewhere.

ASWATHI P

Roll no:2k11/spd/07

M.Tech (SP&DD)

CERTIFICATE

This is to certify that the work contained in this dissertation entitled “**WATERMARKING SCHEME FOR MULTIPLE IMAGES**” submitted in the partial fulfillment, for the award for the degree of M.Tech in Signal Processing and Digital Design at **DELHI TECHNOLOGICAL UNIVERSITY** by **ASWATHI.P**, Roll No. **2K11/SPD/07**, is carried out by her under my supervision. The matter embodied in this project work has not been submitted earlier for the award of any degree or diploma in any university/institution to the best of my knowledge and belief.

Date: _____

(Dr. Rajeev Kapoor)

Professor, HOD

(Department of Electronics and
Communication Engineering)

Delhi Technological University

(Dr. Nidhi Goel)

Assistant Professor, Project Guide

(Department of Electronics and
Communication Engineering)

Delhi Technological University

ACKNOWLEDGEMENT

I owe a whole heartened respect to my supervisor **Dr.Nidhi Goel**, Assistant Professor, Department of Electronics and Communication Engineering, DELHI TECHNOLOGICAL UNIVERSITY, Delhi,for her sincere guidance and encouragement. Her valuable suggestions and advice makes me to complete this project in a successful manner.

I would like to express my profound gratitude to **Dr. RAJIV KAPOOR**, Professor and Head of the Department, Department of Electronics and communication Engineering, **DELHI TECHNOLOGICAL UNIVERSITY,DELHI** for his constant inspiration towards the completion of my project.

I would like to extend my earnest and heartfelt thankfulness to my in laws who were a constant motivation for me not only during the project work but throughout the M. Tech program. Their support gave me the inner strength to sail smoothly through this journey.

I would like to thank all the staff members of Department of Electronics and communication Engineering for extending their helping hands at every juncture of my need.

I am extremely thankful to my parents and friends for their moral support and constructive criticism in completing this project. Above all, I thank the ALMIGHTY, for giving me the strength and wisdom to do this project.

Aswathi.p.

Roll no: 2k11/spd/07

M.Tech. (Signal Processing and Digital Design)

Department of Electronics and Communication Engineering

Delhi Technological University

Delhi-110042

ABSTRACT

Always, the copy of any digital image is similar to the original. This has in many instances, laid way to the use of content of the digital image with malicious intent. So in order to protect any multimedia data against recording and transmitting illegally is to embed a digital signature or copyright label or watermark that acts on behalf of the owner of the data. These schemes i.e, Data hiding, to embed secondary data in digital media, is making considerable progress in recent years and attracted attention from both academia and industry. Many Techniques have been developed for many applications, i.e, ownership protection, also their authentication and access control. Some of the data hiding applications are Imperceptibility, having robustness against moderate processing such as compression, and the ability to hide many bits are the basic but rather conflicting requirements for many data hiding applications. For example, a visible “seal” placed over the image to identify the copyright of a person.

We have worked on Color image compression and Watermark embedding laid on Block Truncation Coding (BTC) together with Parity checking. Unlike others, the proposed method do not bring considerable changes in the original image during watermark casting. Instead of that watermark is added during the compression of the original image. First of all, we convert the input image from RGB plane to the NTSC (YIQ) plane. That means the image is transformed to two planes namely-luminance and chrominance. Then we divide Y plane into non-overlapping blocks and each block is coded by Y_1 & Y_2 , the representative planes and also a Bit map, hence for the planes I & Q, and we obtain the Bitmap and representative values. we add the watermark to the bit map by means of parity check and alteration. To confirm the robustness we put attacks to the output image obtained and by extracting the watermark information from the attacked image.
