REPORT

Delhi Technological University (Erstwhile Delhi College of Engineering) has a glorious past of more than 78 years and is widely acclaimed for its excellence in education, research & training. DTU's transformation from Delhi Polytechnic to Delhi College of Engineering and then finally to Delhi Technological University has taken an astounding shape and the autonomy granted to it has spurred progress in several uncharted territories. The various transformations have helped us to remain young and energetic in our endeavour for academic excellence.

With a history of over 78 years in providing technical education within modern educational infrastructure, DTU is an institution which defines and continues to update frontiers of Science, Technology and Management. DTU is fully networked with Industrial, Academic & Scientific community. It has partnerships with leading Universities and Industries in India & abroad. Baweja** (Head, QuEST Global Defence Engineering Services), **Sanjay Nayar** (CEO, Kohlberg Kravis Roberts India Advisors Pvt. Ltd.), to name a few. Delhi Technological University has been the pioneer of Quality Technical Education, Research and Innovation.

Our University has kept the quality of education & research as its main focus of academic and Professional activities, and this has earned us a high reputation in the country and abroad. This is evident from DTU figuring several times among the Top Ten Engineering Institutions in the country, along with the prestigious IITs. Delhi Technological University has taken several new initiatives in restructuring and strengthening its academic programmes at Postgraduate and Undergraduate levels during the years. Introduction

of new programs at the postgraduate level and focus on research and development are crucial factors that have helped in the recognition of DTU as a premier University for higher learning. The University has emerged as the leading Technological University for higher technical education and research in the country. DTU continues to be the one of the most sought-after destination for undergraduate and postgraduate studies and attracts the top performers in national examinations such as JEE (Mains) and GATE.

We are aware of the enhanced expectations of the student community and public at large and strive to live up to our image that has been so persistently built up over the years. We at DTU are committed to achieve our goals to create an environment in which we can nurture our students to be knowledgeable, innovative and trained to work unceasingly to serve the Nation and society. The development of the Nation depends upon their technical competence and work ethics that they have imbibed during their formative years as students. We are focused to keep pace with the continual progress in the fields of science and technology. The characteristics of the student population at the university are undergoing a significant change in the recent times. The university has responded pragmatically to the large increase in its intake by substantially reorienting itself academically, technologically and administratively and using it as a great opportunity to retain its leadership in engineering education in the country. The undergraduate curriculum for engineering education is designed in such a way that it introduces a new rigor and methodology in undergraduate teaching, laying emphasis on developing analytical skills and challenging the students intellectually.

The university currently offers 14 B.Tech., 20 M.Tech., 3 M.Sc., M.B.A., B.Des., B.Tech. (Evening), BBA, BA (Economics), MBA (Business Analytics), Executive MBA and Ph.D. programs. Delhi Technological University has been selected as Mentor Institute for the TEQIP-III Project for Mentee Institute Madhav Institute of Technology and Science, Gwalior w.e.f. 1st April, 2017 and shall conclude by 30th September, 2020. The institute is covered under Sub-component 1.3: Twinning Arrangements to Build Capacity and Improve Performance. All Post graduate and Ph.D. students involved in research are given the opportunity to interact with research community at the National and International level by providing funds to attend International/National Conferences through TEQIP-III. The research scholars are the primary beneficiary of TEQIP-III scheme, however a good number of PG and UG students have also been benefited. The DTU has signed 4 MoUs in 2018-19 with various universities, institutions and organizations making a total of 28 operational MOUs.

With the mission of providing leading industries with the brightest minds of country DTU entered the 2018-19 placements seasons with confidence. The process began in June 2018 by sending invitation to companies to visit the University for pre-Placement Talks and provide their job announcements. The talks provided avenue for interaction and familiarization of students with the recruiting organizations and their work profile. In academic year 2018-19, a total of 323 organizations took part in campus placements and offered 1306 jobs to B. Tech. students. Highest salary package offered was 1.01 Crores by Facebook in the year 2018-19. Students from B. Tech., M. ACADEMIC PROGRAMMES

- Ph.D. Research Scholars: 12

SALIENT FEATURES

The Department of Humanities was established in the year 1941 with a view to imparting necessary soft skills to the graduating engineering students. Initially courses in English, Economics and Accountancy were taught to the students. With the growing need of new courses like Econometrics, Gender and Technology and timely revision of syllabi of subjects like Engineering Economics and Communication Skills, a crossover between technical and non-technical aspects of learning is facilitated. The main objective is to give the students a comprehensive idea of the competition and the emerging work cultures to make them confident and market ready. To sensitize students towards technological need of the poor and deprived for inclusive growth, B. Tech. students of all the branches are compulsorily asked to visit slum and prepare an assignment on the problems of slum so that the knowledge of their branch of engineering can be used to improve life at slum.

In the current scenario, we need engineers who can develop technologies that are sustainable, user friendly, effective and adaptable with respect to changing social and cultural realities. The Humanities Department is, therefore, actively engaged in the process of research work, courses and finishing lectures which are organized throughout the year for the benefit of students and teachers alike.

432 KW roof top Solar Photovoltaic power plant on resco model and 40 KW SPV plant on capex model are functioning at Delhi Technological University.

Delhi Technological University has installed 432 KW roof top Solar Photovoltaic power plant on resco model which has been installed by M/S Hero Future Energies on the terrace of the various departments of Delhi Technological university. This has been further added by 40 KW SPV plant by M/S Photon Energy Systems Ltd. on capex model on the rooftop of administrative building. All together there has been 472 kW SPV plant in DTU. Both the plants have been working very satisfactorily. All 472 kW solar panels have been installed in Science block (108 kWp, having 1 Electronic solar

metre), Mechanical block (150 kWp, having 2 Electronic solar metres) and Electronic block (174 kWp, having 3 Electronic solar metres). In this regard an agreement has been signed between DTU and M/S Hero Solar Energy Pvt Ltd. For twenty-five years with tariff of Rs. 5.80 per KWH w.e.f. 01/06/16. Since solar radiation is variable throughout the day, throughout the month and the year. It does not remain constant. Hero Solar Energy Private Limited generates the bill every month and DTU makes the payment. It has been observed that all the solar electricity output of all the 432 kW solar panel from all the 6 electronic metres are found as 38677 kWh for January 2019, 39147 kWh for February 2019, 62796 kWh for March 2019, 60653 kWh for April 2019, 58702 kWh for May 2019, 56441 kWh for June 2019, 41085 kWh for July 2019. A 40 kWp system has been also commissioned in the month of June 2015 and functioning properly. It has two inverters of 20 kW each connected to the above system. The control room has been built on the ground floor at the back of the building. The DC power so generated by the SPV plant is converted into AC power by the SSE model inverters and fed to the 3 phase Delhi Technological grid.

The above two systems are grid connected to the TATA Power Delhi Distribution Limited (TPDDL) and are controlled in such a way that whenever solar electricity is produced it has priority to the DTU grid. It means that when DTU has zero load then only it will be exported to the TPDDL. The cost of the solar electricity comes cheaper than the cost of the electricity provided by TPDDL.

5.4 Kitchen Waste Plant

Delhi Technological University in collaboration with Bhabha Atomic Research Centre (BARC) and M/S AVI plast have set-up a 500 kg per day kitchen waste biogas plant in the backyard of main DTU canteen. This is based on Nisargruna technology, developed by BARC which is a method of processing biodegradable food and kitchen waste. It is an environment friendly technology, which delivers two valuable products i.e. flammable methane gas and organic manure. This plant was installed and commissioned in April 2014. Initially, the system started functioning with about 50 kg wastes per day and slowly it moved to more than 100 kg per day and in due course of time it will reach to its full capacity i.e. 500 kg per day. The equal amount of water is also mixed with the waste at the inlet of the digester. Food waste is mixed with water and then grinded and fed to the inlet of the plant. The methane gas so generated by this plant is fed to the kitchen of the main canteen.

This kind of technology is very useful to various vegetable mandi and Municipal Corporations to process their vegetable waste as most of biodegradable waste can be utilized as raw material for the

plant. Biogas and manure are valuable product. Nevertheless, whole technology creates various types of opportunities for different prospects. Biogas can also be used for the generation of Electricity. Waste segregation at the source is another major issue which needs proper attention. Biogas production is faster because of combination of aerobic and anaerobic digestion technology. Electricity generation from biogas is also one of the potential benefits. This technology development will save environment to greater extent. It will also provide benefits in the form of Biogas, reduction in GHG emission, health benefits, social benefits and benefits in terms of financial investments. In future there will be scope for extra benefits like subsidies and benefits like carbon credits, which will give high rate of return on total investment. Entrepreneurs will excel in their ventures by selling services and products related Technology. DTU is in contact with some other organizations to provide consultancies in this area. The DTU students have already produced some research papers. Few students are doing their B. Tech., M. Tech. and PhD.. projects. Presently this plant is under maintenance and operation. A contact has been established with M/S Absloute water Pvt Ltd. Delhi to maintain this plant. After going through technical details, and discussions, M/S Absolute water has agreed to maintain the above plant. Some of the equipment installed earlier may need repair/upgradation or replacement for smooth operation of the plant to achieve the maximum possible output. A techno-commercial proposal is under way to revive the above plant.

Recent Field Work Done in 2019

Multidisciplinary Centre for Geoinformatics, DTU is working on a GLOF related project awarded to it under National Mission on Himalayan Studies. The study under the project is focused on finding the potential glacial lakes in Alaknanda River basin, Uttarakhand that may be vulnerable due to GLOF. Two JRFs, Mr Gopinadh Rongali and Ms Aayushi Pandey are working with PI, Prof KC Tiwari under this project. Identification of glacial lakes is being done using Landsat time series data and is known as inventorisation of lakes. Identification of potentially dangerous lakes is also simultaneously done. Recently, while making the inventory of vulnerable lakes, the two research fellows identified one of the possible highest dangerous glacial lake of Alaknanda basin, Uttarakhand in the western Himalaya which may also be a potential vulnerable lake for GLOF. This Glacial lake is situated at an altitude of 5584 m (Lat/ Long: 30°58'33.26" N, 79°27'33.52" E) and is possibly one of the

highest potentially dangerous lake at this altitude particularly because of Army and ITBP staying nearby. The maximum surface area of the lake as assessed from the satellite image, acquired on 16 September 2018, is approximately 0.21 sq.km². In order to validate the findings and also to ascertain various other physical parameters of the lake, a massive field work was carried out from 29 September, 2019 to 11 October, 2019 ahead of Joshimath in general area Ghastoli and Raktakona, Uttarakhand. Both the JRFs along with two students of M.Tech Geoinformatics (Mr Vishal and Mr Vivek) took part in the field work. Since the area fell along the Indo-China border, the mobilization not only required Inner Line Permit from the SDM Joshimath but also successive stages of acclimatization and support and permission of both the Indian Army and ITBP (Mana,,Ghastoli and Raktakona). The mission was accomplished successfully, the field data has been collected in the form of lake photographs, videos and soil samples. The data is being analysed and the flood modelling carried out. It is now proposed to repeat the field work again for further verification subject to clearance from Army in June 2020.

The centre is networked through high-end intelligent Dax/Avaya/D-Link/Brocade

manageable switch, and possesses round the clock two leased lines of 200 Mbps (Bharti Airtel) and 10Gbps link of NKN (shared bandwidth) in different pipes for the Wi-Fi connectivity in the Library, Academic, Departments, Administrative, Faculty residence and Hostel blocks of the campus, with internet facilities on all the nodes. Access for internet is given to end user after secure authentication. Network traffic is being monitored & controlled by full version of checkpoint (UTM). Presently all the 290 computers are connected through LAN in two floors of computer centre providing internet access. It is providing programming facilities to all the departments of the university. The departments/academic/library/administrative blocks, faculty residence and all the hostels of DTU are interconnected using 48 core & 6 core optical fiber cable(OFC) and Wi-Fi with 180 number of access points.

The present network setup satisfies the needs of the University's rudimentary Internet connectivity and maximum resource sharing for the connected departments. To put DTU on par with IITs and reputed NITs, it is necessary to use Information Technology as the backbone for its academic, research, consultancy and administrative ventures.

DTU Website

Computer Centre maintain DTU websites (www.dtu.ac.in), alumni portal, departments portal, library portal, IQAC portal, faculty portal, hostel portal, student portal, DTU times portal, and other related intranet/internet web services.
