### DECLARATION

I, Mr. Abhradeep Goswami, a student of EMBA 2020-22 of Delhi School of Management, Delhi Technological University, Bawana Road, Delhi – 42, hereby declare that the project report <u>"Influence of Social Media in Automotive Purchase Behavior</u> <u>During Covid-19 Pandemic"</u> submitted in partial fulfillment of Degree of Masters of Business Administration (Executive) is my original work conducted by me.

The information, analysis and data presented in the report is authentic to the best of my knowledge.

This report is not being submitted to any other University, for award of any other Degree, Diploma or Fellowship.

Abhradeep Goswami

Date: Place:

#### ACKNOWLEDGEMENT

I would like to express my sincere gratitude towards my project guide, Prof. Rajan Yadav (Professor, Delhi School of Management, DTU) for his support and valuable guidance throughout the duration of the project. His valuable insights and efforts have helped me a lot in completion of this project.

My sincere gratitude goes out to my colleagues who supported me throughout the course of this project. Special mention of gratitude must go out to the contribution of all the respondents of my survey. The data collected from their inputs forms the backbone of this project.

Last but not the least, I would like to express my heartfelt thanks to my parents and Almighty God whose blessings have motivated me to complete this project successfully.

Abhradeep Goswami

#### **EXECUTIVE SUMMARY**

During the past years of pandemic many physical activities have been converted into online mode. Among this, one major activity is analyzing vehicles before purchase by potential customers. Earlier, the only way for a potential customer to research the details of a particular vehicle or category of vehicle was to visit the nearest showroom and find out hands on. Apart from this, it involved rigorous study of technical specifications provided by the company and compare it with others.

With restricted movement outside their homes, many customers have now turned to online platforms for reviews of the products they are planning to purchase. It provides an easy, hassle free option of potential buyers to review the products they are willing to purchase. This aids them immensely to narrow down choices and finally make the purchase decision.

This study aims to focus on the impact of social media influencers on the mind of the customers. Review of relevant literature sheds light on the previously conducted research in this domain and their findings. Based on this study, hypotheses were formulated and questionnaire was designed to collect a wide range of data from respondents who were considered potential customers of the Indian Automotive Industry. The data has been analyzed using suitable tools to test the initial hypotheses and come up with conclusions.

The research covers different areas of customer behavior and preferences w.r.t to cars as well as their life on social media. Attempts have been made to study the relationship between various aspects such as age, gender, etc. and inclination towards car segments, attributes as well as social media behavior. These linkages have been used to formulate strategies that can be beneficial for social media marketing of Indian Auto products.

# TABLE OF CONTENTS

#### **CHAPTER 1: INTRODUCTION**

# **1.1 Background**

Media is considered to be the 4th pillar of democracy. In recent years a new breed of media called 'social media' has taken over the entire world. Owing to ease of accessibility due to technological advancements, this new form of media has completely captured the imagination of human mind across all age groups, genders and ethnicity. The power of social media cannot be overlooked and it has spread its influence in every domain of the modern human civilization. The wide variety of contents available on social media caters to the needs of all types of individuals as the creators are themselves a part of the common society.

Earlier the rights of content creation were highly limited and confined to a specific layer of the society. These people were either exceptionally talented, rich or professionally trained to create content which was then considered to be fit for selling to the public through a well-organized industry. The general public didn't have any open forum to share their content with others and those who were willing to do so had to go through the rigid and exhaustive process, invest time and money to publish whatever they create. Also, there were restrictions, censorships and other taxing rules which made it a very unviable option.

However, with the advent of internet age, smart phones and devices and other technological breakthroughs, all these barriers have been broken open. Now the common man can create, publish and get recognition for his/her content very easily without have to going through the earlier hassles. This has led to an enormous number of content creators and influencers come to limelight over the past decade. The rules and restrictions of the social media platforms allow a great degree of freedom for content creators as well as allow them to bypass any kind of screening process. The audience at large is the evaluator of the content and if the content is good, it can get viral very easily and reach millions of people across the globe.

Since the rise of Covid-19 the Indian Auto industry has seen a sharp decline in sales. The initial days were the worst when the entire country was under lockdown and there was no possibility of production or sale of any vehicle. The sales numbers were going down drastically and production came to a standstill. The entire supply chain was affected. No one could predict what would be the future of the one of the biggest industries in the country.

However, as the country started unlocking, a variety of factors came into play which would shape the existence of the massive Indian Auto Industry. In such times it is very crucial to predict customer behavior in order to forecast production and sales activities for the OEMs and as well as vendor companies that run this sector.

Considering the current scenario and lucrative market of social media, the theme of the project has been selected. Efforts will be made to explore the realm of social media and study various aspects that can lead to a successful project in this domain.

# **1.2 Problem Statement**

In the current situation of dynamic market forces, the key focus of every organization is to occupy the minds of its customers. This is evident from the culture of running targeted ads based on data extracted from users through various online portals, websites and apps. The same conditions are applicable for auto industry also. The problem is to identify potential customers and factors that influence their purchase decisions to the highest degree of accuracy as possible. Any organization that can align its marketing strategies with the voice of the customer will gain a considerable competitive edge in the markets.

#### **1.3 Objectives**

The Objectives of the project are as follows: -

1.3.1 To study and analyze potential customer behavior for the Indian Automotive Industry under current pandemic conditions and wide spread social media use. 1.3.2 To formulate strategies for Auto OEMs that will lead to better sales and gain competitive edge in the market by tapping into the potential of Social Media Influencers.

# 1.4 Scope

This project caters to the preferences and factors that influence purchase decisions among potential customers of the Indian Automotive Industry. It has been carried out over a span of 6 months in 2022 and thus also highlights the impact of Covid-19 on the aforementioned topics. Data collection has been done from a sample of working population in and around the NCT of Delhi. The findings are applicable for any Automotive OEM of India.

# **CHAPTER 2: LITERATURE REVIEW**

#### Table 2.1: Literature Review Details

|----|---|---|---|
| 4. | Effect of Social<br>Media Influencer<br>Roles, Credibility<br>and Advertising<br>Values on Attitude<br>and Brand Love | <ol> <li>Study focusses on<br/>marketing concentrated<br/>on role of social media<br/>influencers</li> <li>Role and credentials of<br/>Influencers are the<br/>factors which brands<br/>should consider to</li> </ol>   | (2020) have conducted an<br>extensive study on how<br>social media influencers can<br>help companies to market<br>their products. Credible<br>influencer can affect the<br>purchase decisions of their<br>followers. The process is   |

market their products beneficial for influencers and through these influencers can motivate them to produce better content. Thus, a cycle 3. It is a cost-effective of positive reinforcement can marketing strategy be achieved in this compared to traditional ecosystem. This can be advertising highly beneficial during 4. Influencers with good pandemic times and can be content can influence extended to marketing of all purchase decision and types of products enhance brand love Source: Own Analysis

**2.1 Discussion on Literature Review** 

The above literature review sheds light on the was the Indian Automotive Industry has suffered during the pandemic and how the current shifts in marketing strategies are taking place. Customers are preferring the online mode for research before making their purchase decisions. In such circumstances the role of Social Media Influencers has become vital. These influencers can enable the brands to tap into new areas for marketing of their product.

#### **CHAPTER 3: RESEARCH METHODOLOGY**

As this project focusses on capturing the "voice of the customer", primary research has been carried out by floating survey forms and collecting data. The questionnaire was designed to capture the preferences of potential customers considering current pandemic situation and wide spread use of social media. This data was then used for further analysis and derive conclusions and recommendations. Data analysis tools such as Correlations, Chi Sq Test, Normal Distribution Curves, Radar Charts etc. were used for the analysis.

#### **3.1 Research Design**

Cross sectional - descriptive research design has been used in this study. The descriptive research design permits the quantitative analysis of data to understand a particular phenomenon.

#### **3.2 Respondents**

The respondents of survey belong to working population of both genders in the age group of 20-50 years in India.

#### **3.3 Sample Size**

The sample size for this survey was 43.

#### **3.4 Sampling Technique**

Convenience sampling technique has been used for this research.

#### **3.5 Data Collection Process**

Data has been collected by floating Google Forms to the respondents through various social media platforms such as WhatsApp, Facebook, Instagram, etc. Responses received have been reflected as excel sheet reports from Google Forms. The Google Form link is: - https://forms.gle/h5wYa1dBg3gWJK4c6

# **3.6 Nature of Questionnaire**

The Questionnaire was in online mode. It contained Open Ended, Close Ended, Dichotomous and Likert Scale type of questions. The questionnaire was designed to collect different types of data from the respondents and so different types of questions were framed accordingly. Below are the compiled questions asked in the questionnaire:

| Q No. | Questions  |
|-------|--|
| 1     | Name   |
| 2     | Age  |
| 3     | Gender   |
| 4     | Preferred car segment for purchase   |
| 5     | How important is Engine Performance?   |
| 6     | How important is Car appearance?   |
| 7     | How important is Vehicle Safety?   |
| 8     | How important is Latest Features and Smart Technologies?                               |
| 9     | How important is Driver/Traveler comfort?  |
| 10    | Which Social Media sites do you use?   |
| 11    | Favorite genre of contents you follow on social media                                  |
| 12    | Do you find content creators of opposite gender more engaging?                         |
| 13    | Which Attributes of a Content Creator/Influencer appeals to you the most?              |
| 14    | Do you think Social Media Influencers are becoming Role Models for their followers at  |
| 15    | How much influence do you think these influencers have in your Lifestyle Choices?      |
| 16    | How would you rate your degree of Trust on the integrity of your favorite Social Media |
| 17    | How reliable do you feel are reviews of social media influencers when it comes to      |
| 18    | Name some of your favorite social media influencers                                    |
| 19    | How likely are you to purchase a specific model of vehicle if you are impressed by a   |

#### Table 3.1: Compiled questions of survey

Source: Own Analysis

# **3.7 Hypotheses Formulation**

Below is the list of Hypotheses formulated for testing using the data collected from survey. The idea behind formulating the hypotheses was to test association among different behaviors and tendencies of the respondents who are also considered as potential car buyers for the Indian Automotive Industry. Here,  $H_o$  stands for Null Hypothesis and  $H_a$  stands for Alternate Hypothesis.

Table 3.2: Hypotheses for the research

| Scenario | Hypotheses   |
|----------|--|
| 1        | H <sub>o</sub> : There is no significant association b/w age and preferred car segment for purchase<br>H <sub>a</sub> : There is significant association b/w age and preferred car segment for purchase  |
| 2        | <ul> <li>H<sub>o</sub>: There is no significant association b/w importance of engine performance and preferred segment for car purchase</li> <li>H<sub>a</sub>: There is significant association b/w importance of engine performance and preferred segment for car purchase</li> </ul>          |
| 3        | H <sub>o</sub> : There is no significant association b/w importance of car safety and<br>preferred segment for car purchase<br>H <sub>a</sub> : There is significant association b/w importance of car safety and<br>preferred segment for car purchase  |
| 4        | <ul> <li>H<sub>o</sub>: There is no significant association b/w gender of respondents and preference towards influencers of opposite gender</li> <li>H<sub>a</sub>: There is significant association b/w gender of respondents and preference towards influencers of opposite gender</li> </ul>  |
| 5        | <ul> <li>H<sub>o</sub>: There is no significant association b/w the respondents' consideration of influencers as role models and their age</li> <li>H<sub>a</sub>: There is no significant association b/w the respondents' consideration of influencers as role models and their age</li> </ul> |

|    |   |

# **3.8 Data Analysis Tools**

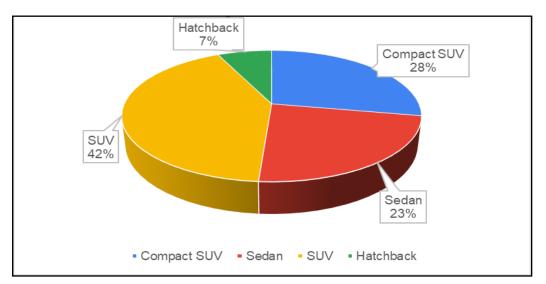

The data analysis tools used for this research are software such as MS Excel and SPSS. Hypothesis testing was done using Chi Square test and Anova test.

# **3.9 Data Analysis Techniques**

The data analysis techniques used for this research are descriptive analysis, dispersion analysis, regression analysis, bar charts, pie charts, radar charts, scatter plots and normal distribution curves.

# **CHAPTER 4: DATA ANALYSIS**

Analysis of the primary research data collected through survey is shown in the following section. Scenario wise hypotheses, as mentioned in previous chapter, have been tested along with relevant data representation collected from the survey.

#### Source: Own Analysis

<u>Observation</u>: Most of the candidates prefer the SUV segment of cars which includes Compact SUVs as well. Next preference is for Sedans and very few prefer the Hatchback segment of cars for purchase.

# Scenario 1 Hypothesis Testing:

H<sub>o</sub>: There is no significant association b/w age and preferred car segment for purchase.

H<sub>a</sub>: There is significant association b/w age and preferred car segment for purchase.

#### Table 4.1: Scenario 1 Case Processing Summary

|   | Cases               |        |   |         |    |         |
|---|---------------------|--------|---|---------|----|---------|
|   | Valid Missing Total |        |   |         |    | tal     |

| Total                     |             | Count          | 2                                     | 12   | 29   | 43    |
|                           |             | Expected Count | 2.0                                   | 12.0 | 29.0 | 43.0  |

#### Source: Own Analysis

#### Table 4.5: Scenario 2 Chi-Square Test

|                    | Value               | df | Asymptotic<br>Significance<br>(2-sided) |
|--------------------|---------------------|----|---|
| Pearson Chi-Square | 17.820 <sup>a</sup> | 6  | .007                                    |
| Likelihood Ratio   | 17.192              | 6  | .009                                    |
| N of Valid Cases   | 43                  |    |   |

a. 8 cells (66.7%) have expected count less than 5. The minimum expected count is .14.

#### Source: Own Analysis

As p = 0.007 < 0.05, hence we reject  $H_o$  and accept  $H_a$ . There is significant association b/w importance of engine performance and preferred segment for car purchase. It is

observed that respondents who give higher importance to Engine Performance prefer the SUV/Compact SUV segment.

#### Scenario 3 Hypothesis Testing:

H<sub>o</sub>: There is no significant association b/w importance of car safety and preferred segment for car purchase.

H<sub>a</sub>: There is significant association b/w importance of car safety and preferred segment for car purchase.

#### Table 4.6: Scenario 3 Observed vs Expected Values

a. R Squared = .030 (Adjusted R Squared = -.102)

# Source: Own Analysis

Value of p = 0.949 > 0.05, hence we accept  $H_o$  and reject  $H_a$ . There is no significant association b/w how much trust respondents have on reliability of influencers and their gender and age.

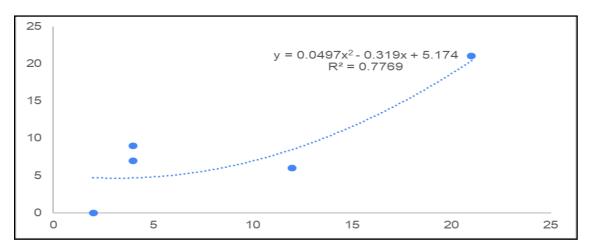

Source: Own Analysis

<u>Observation</u>: This normal distribution curve shows that the sample has given higher than mean rating to the impact social media influencers can have on the purchase decision making of their followers.

Figure 4.12: Positive Correlation b/w Integrity and Reliability of Influencers

Source: Own Analysis

<u>Observation</u>: There is a positive polynomial correlation between the ratings given to degree of trust on the integrity and reliability of social media influencers. This means that if a particular influencer is believed to have high integrity, he/she is more reliable for his/her followers. The degree of reliability increases by a squared factor with the increase in reliability.

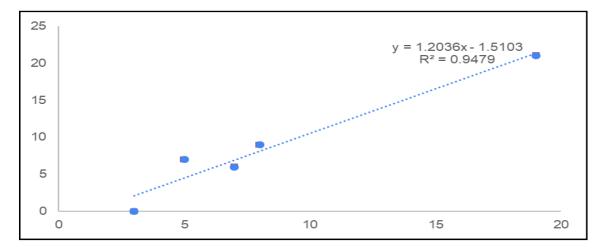

Figure 4.13: Positive Correlation b/w Integrity and Impact on Purchase decision making

#### Source: Own Analysis

<u>Observation</u>: There is a linear positive correlation between degree of integrity of influencers and their influence on purchase decision making of their followers.

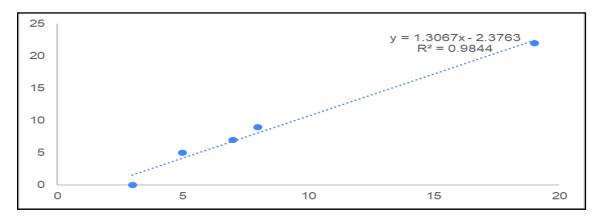

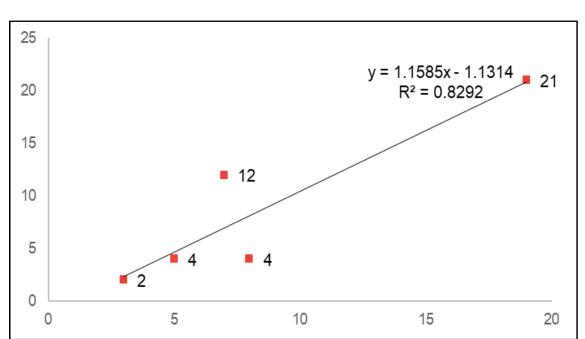

Figure 4.14: Positive Correlation b/w Impact on Lifestyle Choice and Purchase decision making

Source: Own Analysis

<u>Observation</u>: There is a linear positive correlation between influence of social media influencers on Lifestyle choices and Purchase decision making. This means that the more the influence social media influencers have on the lifestyle choices of their followers, the more they can influence their purchase decision making also.

#### Source: Own Analysis

<u>Observation</u>: There is a linear positive correlation between the degree of reliability of social media influencers and the impact they have on the purchase decision making of their followers. The more reliable the influencers are, the more they can impact purchase decisions of their followers.

# Scenario 10 Hypothesis Testing:

H<sub>o</sub>: There is no significant association b/w purchasing a car if respondents are impressed by a Social media influencer and their gender, age or preferred car segment.

H<sub>a</sub>: There is significant association b/w purchasing a car if respondents are impressed by a Social media influencer and their gender, age or preferred car segment.

# Table 4.17: Scenario 10 ANOVA test

# **Tests of Between-Subjects Effects**

Dependent Variable: How likely are you to purchase a specific model of vehicle if you are impressed by a social media influencer endorsing it?

|                           | Type III Sum        |    | Mean   |         |       |

a. R Squared = .459 (Adjusted R Squared = .148)

#### Source: Own Analysis

Here, p = 0.187 > 0.05, hence we accept  $H_o$  and reject  $H_a$ . There is no significant association b/w purchasing a car if respondents are impressed by a Social media influencer and their gender, age or preferred car segment.

#### **CHAPTER 5: FINDINGS & DISCUSSION**

After conducting a detailed analysis of the primary data collected through survey, the following points can be put forward: -

- Current pandemic situation has caused a shift in traditional modes of interaction between the customers and the producers or distributor of vehicles. With wise spread use of social media that can be accessed within the comforts and safety of home, more and more people are using online modes for research and analysis before making their purchase decisions.
- 2. Social media provides a huge market for Indian Automotive companies to for marketing, promotion and branding. Customers are more informed due ease access to the internet and prefer making doing their own research rather than referring to traditional modes of advertisement. Social Media users are more inclined to authenticity of online reviews provided by other users than claims made by the companies directly through their advertisements.
- 3. This research reveals the categorical preferences of potential customers both with respect to their choice of vehicles as well as their choice of online content to follow. Irrespective of age the customers have similar preferences for car segments they are interested in making purchase.
- 4. Potential customers who give higher weightage to engine performance and comfort prefer the SUV/Compact SUV segment of cars. Safety is a highly desirable attribute in a vehicle and customers of all segments prefer a safer car for purchase.
- 5. Social Media Influencers have a huge potential for carrying out marketing, promotions and branding for any automotive company. More and more people are engaging with these influencers and are deeply impacted by the contents these creators create on social media platforms. It is observed that male potential customers have a higher tendency to engage with female

social media influencers. Irrespective of age and gender, the respondents are more attached to higher creativity of content created by influencers.

6. Irrespective of gender and age, the respondents have considerable faith on the integrity and reliability of social media influencers. The acknowledge the power these influencers have on their daily lifestyle choice and also on purchase decision making process. Respondents are highly likely to make a purchase decision if they are impressed by a social media influencer, irrespective of their age, gender or segment of car endorsed.

#### **CHAPTER 6: RECOMMENDATIONS**

Based on the analysis of data and relevant findings, below recommendations can be put forward for Auto OEM companies to better target their prospective customers and improve overall sales:

- 1. More focus should be laid on products of SUV segment as they are in highest demand among the Indian car buyers.
- 2. Vehicle safety and passenger comfort are the most sought-after qualities potential buyers are looking for in their vehicle. So Indian Automotive Companies should invest more on these aspects of their products.
- 3. YouTube and Instagram are the most commonly used social media sites by potential car buyers, so companies should target their marketing on these platforms more.
- Art & Entertainment, Health & Fitness, News and Documentary, Travel & Tourism and Technology are the most preferred type of contents viewers follow. So, marketing campaigns should be focused on these genres of content.
- 5. Male customers are more likely to engage with female social media influencers and thus, can be targeted better by involving such creators in the marketing process.
- 6. Social Media Creators who have a higher influence on daily lifestyle choices of their followers and poses high integrity or are very reliable are most likely to have a high impact on the purchase decision making process of their followers. Indian Automotive Industries must select such creators and involve them in marketing their product.

# **CHAPTER 7: LIMITATIONS**

Limitations of this project report are mentioned as below: -

- 1. The preliminary research was conducted on a small sample size with limited questions. A larger sample size with more strategic questionnaire could yield more accurate and reliable data.
- Simple data analysis tools have been used in this research. Better analysis can be carried out using specialized data analysis software over a wider range of data.
- 3. The preference of potential car buyers may change over time. In that case, the effectiveness of this research will decline.

#### **CHAPTER 7: CONCLUSION**

The project carries out a detailed study of the current behavior of potential customers of the Indian Automotive Industry with a backdrop of the Covid-19 pandemic. Relevant literature review sheds light on the current situation of the industry and paradigm shift in marketing, branding and promotional activities. It further highlights the increasing role of social media and influencers due to wide spread use of internet. These aspects are studied in details through research and analysis of primary data collected through survey. Analysis of this data reveals the details of consumers' online behavior and preferences. The importance of social media influencers is revealed through the data analysis. Various tools such as Correlation, Normal Distribution, Chi Sq tests, etc. are used in this research project. Finally, the findings are summarized and recommendations are formulated. Indian Automotive Industries can use these recommendations to salvage the enormous potential of Social Media Influencers to boost their product promotion and brand popularity. This will help them recover from the losses they are currently facing due to various factors by increasing revenue generation through sales.
