## **EVALUATION -**

The following table shows that how many journals are standard and how many are not. The number indicates the quantity of presence.

<b>TOTAL JOURNALS</b>	<b>46</b>
<b>COUNTRY IN WHICH THE JOURNAL PUBLISHED</b>	<b>38</b>
<b>STARTING YEAR OF THE JOURNAL</b>	<b>32</b>
<b>FREQUENCY OF THE JOURNAL</b>	<b>36</b>
<b>CURRENT ISSUES INFORMATION</b>	<b>39</b>
<b>EDITOR OF THE JOURNAL</b>	<b>37</b>
<b>INFORMATION ABOUT THE EDITORIAL</b>	<b>39</b>
<b>INFORMATION ABOUT THE BOOK REVIEWS</b>	<b>40</b>
<b>INFORMATION ABOUT REVIEW ARTICLES</b>	<b>40</b>
<b>INFORMATION ABOUT THE NEWS</b>	<b>42</b>
<b>INFORMATION ABOUT RESEARCH PAPERS</b>	<b>38</b>
<b>INFORMATION ABOUT THE PEER REVIEWED</b>	<b>39</b>
<b>INFORMATION ABOUT THE COVERAGE</b>	<b>46</b>

The table shows that this project has ~~forty-five~~ <sup>forty-six</sup> journals in which twenty-seven journals are standard journals and have all information's regarding, the country from which it is issued, starting year, frequency, current issues, name of the editor, volumes details, coverage, pages, book reviews, book mark, colours, etc. But ~~nineteen~~ <sup>nineteen</sup> journals are not standard. They do not have full details of information. Such as: -

Eight journals do not have the information about the country from which they are published.

Fourteen journals do not have the information regarding starting year of publication.

PGDLAN-MLIP-008

## **TOPIC OF THE PROJECT REPORT** **Information Resources on Web or Web Resources.**

**(1) TITLE OF THE PROJECT REPORT:** - Free on Line-Journals Available on Web in the field of

Engineering and Technology.

**(2) OBJECTIVES OF THE PROJECT REPORT:** - The traditional sources of information in any

branch of knowledge are the written words and, therefore, information sources in a given discipline were (and even now) referred to as “literature” that included all definitive sources of information including Journals, encyclopedias, handbooks, textbooks, monographs in series, progress reports, annual reviews, conference proceedings, dissertations and data books. However, with the growth of other forms of dissemination of information especially on electronic media, the term “information sources” was increasingly used in preference to “literature”.

Due to explosion of knowledge in the field of Science & Technology its literature is growing day by day, so it is not possible for any library and information center to store this information in documents. To fulfill the demand of fourth law of library science “**SAVE THE TIME OF THE READER**”, the importance of Internet information resources plays a very big role to fulfill the demands of fourth law of library science. There are so many on-line information available on computer through Internet with help of which the user gets his/her relevant information related to his/her fields of specialization, and thus helpful to save their time. One of the internet information resource is available for the library professionals free of costs is free on line journal in the field of library & Information science and they are more acquainted with the latest development taking place in their fields. This free online journal plays a vital role in dissemination of information & knowledge in the field of Engineering and Technology.

Internet information resources can be defined as resources (including documents and non-documents) in electronic format that provide information or an indicator to the information and are accessible over the Internet. Electronic Journals, or “e-journals”, are used for those journals and newsletters that are prepared and distributed electronically. Electronic journals may be defined very broadly as any journal, magazine, e-zine, webzine, newsletter or type of electronic serial publication which is available over the Internet and can be accessed using different technologies such as WWW, Gopher, ftp, telnet, e-mail or listserv. Several traditional Journals are now being published both on the Web and in print. Current issues or content lists for most of the journals are available on the Web or distributed to subscribers as e-mail text messages.

Internet-based electronic journals started to appear in the beginning of 1990. These journals were mostly delivered as an attachment to e-mail while their back issues were mounted on anonymous ftp sites and users were required to download

them from these ftp sites. The libraries and information centers made them accessible through their gopher site. 1995 witnessed a peaking of gopher technology, which then dropped suddenly and dramatically by 1997. With the advent of WWW technology in 1993, electronic publishing became more than a novelty. The web as a means of delivery of electronic information has grown steadily since then. As publishers experiment with different publication modes and models, the very definition of a journal is undergoing change in the electronic environment. New journals have evolved based on the graphic capabilities of the Internet that are available only in electronic form.

With advent of CD-ROM technology as optical storage media in the mid-1980s, several electronic journals started appearing on CD-ROM. The first major development in this direction were projects experimenting with electronic equivalents of printed Journals. One of the oldest examples is ADONIS where images of articles published in printed journals are distributed on CD ROM. Still older examples are full-text online journals offered by the major host organizations. Online hosts like DIALOG and STN were not only offering online databases but also full-text online journals for past several years, although as a simple ASCII or text files without graphics and pictures. In 1989, there were almost 1,700 full-text sources available through sixteen online systems. All of these projects involved journals and all of them were by definition electronic, but these journals were not truly electronic, and can at best be described as electronic versions of printed journals.

The number of electronic journals has grown in dramatic proportions from less than 10 in 1989 to more than 8,500 in April, 2000. The 37<sup>th</sup> edition of the Ulrich's International Periodical Directory (1999) reports that of a total of 1,57,000 serials listed in the Directory, 10,332 are available exclusively online or in addition to their print counterparts. But these journals are much expensive so due to the uncontrolled rise in the prices of the Journals in the field of Engineering and Technology, the researchers are finding it difficult to access the Journals accordingly. So it is thought to identify the Web Site of the Journals available on Web free of charges. The journals may include the publications of various professional societies in the field of Engineering and Technology and the Journals published with the efforts of individuals.

### **(3) METHADODOLOGY: -** Search engines also sometimes called 'Spiders',

'Crawlers' or 'Robots' are the most popular means of finding information on the Net. Since these are machine generated indexes, they include more resources and they often contain information not listed by other tools described later in this document. The Spiders', 'Crawlers' or 'Robots' constantly visit sites and index many new pages thereby constantly adding to their database. However the search engines are also the least advantageous when attempting to locate high-quality materials, because they do not discriminate between the quality of the materials which are indexed. At times search engines fetch us more number of false drops and misses due to vagaries of word usages.

There are several categories of search engines, such as:-

- ❖ General Search Engines (Ex. Alta Vista, Excite, Google, Northern Light.)

- ❖ Regional Search Engines (Ex. Curry Guide, Euro Ferret, Euro Seek, Exite UK, Lycos UK).
- ❖ Subject-Specific Search Engines (Ex. Biochemistry Easy Search Tool, Geo Index, Health World Search.)
- ❖ Meta Search Engines (Ex. Meta Crawler, Savvy Search, The Big Hub.com )

Various search engines (Yahoo, Google, AITA-VISTA, LYCOS, etc.) will be used for searching the journals in the field of Engineering and Technology. After finding out the titles of Journals they will be verify from the actual sight and their details like publishers, editors, frequency and medium of availability (Print/Online/CD-Rom) will be ascertained.

**(4) INPUT TO PROJECT:** - By using suitable hardware and software a Web Page will designed from where the free on line available Journals can be searched subject wise. A complete detail of respective Web sites will also be made available to enable the users to open the sites and consult the Journals.

**(5) OUTPUT TO THE PROJECT:**- The project will provide a comprehensive directory of the On-Line Journals and asses the feasibility of such products for use by the researchers. The project will also assess the modalities of acceptability of this type of Journals for future expansions.

**(6) PROCESS LOGIC:** - As the use of different search engines, they produced different results. The use of logic and actual verification of the sights and their contents is required in every case.

**(7) LIMITATIONS OF THE PROJECT:** - The use of search terms and various indexing techniques by the different search engines.

**PREPARED BY :- Kalpana Sharma**

Comments/ Suggestions for reformulation of the project.

Revised Title "An Evaluation of free On-line Journals available on the Web in the field of Engineering and Technology."  
Objectives should be clear.  
Language may be improved.

## LETTER /CERTIFICATE OF APPROVAL

(By the Supervisor)

I hereby certify that the Proposal for the Project entitled Free on line Journals available on web in the field of Engineering Technology. by (Candidate's Name) Kalpna Sharma has been prepared after due consultation with me. The proposal has my approval and has, to my knowledge, the potential of developing into a comprehensive Project Work. I also agree to supervise the above-mentioned Project till its completion.

RK

(Signature of the Supervisor)

Name R K SHUKLA

Designation LIBRARIAN

Teaching Experience 19 Years

Qualifications of the Guide MA - MLIS

(Attach Bio Data also) also

Address Delhi College of Engineering, Delhi

## **ACKNOWLEDGEMENT-**

Journals play a vital role in the field of information so keeping this point of view in my mind I decided to work on this project **"An evaluation of free on line journals available on web in the field of engineering and technology"** so that readers could get information regarding journals at hand. My point of view was appreciated by my esteemed guide Shri. Rama Kant Shukla. (Librarian,D.C.E)

I accomplished this project under his kind guidance. He is very kind and cooperative. I haven't any word to express my thanks to respected sir and his staff.

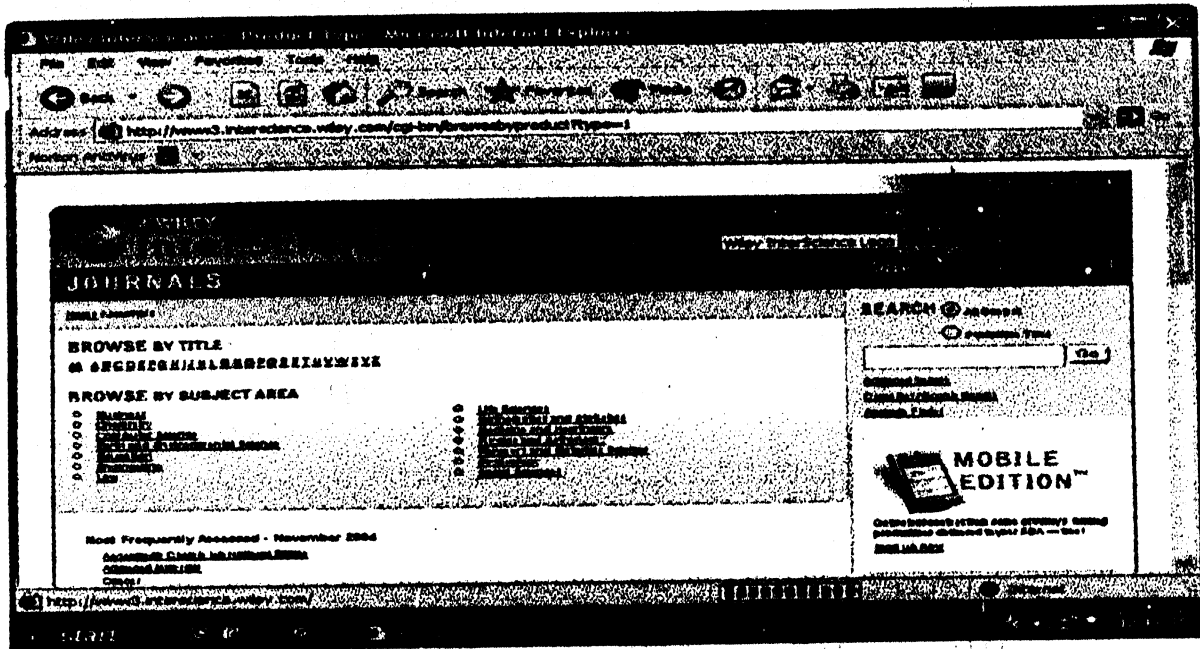

Love and affection that has been shown by my family members in connection with this project played a major role.

## **INTRODUCTION-**

It has always been the human nature that we want all the things to be done in a simplified and easy way. There is no doubt that when things are simplified or summarized, they make our work easier and save our time and energy. Simplified and well-arranged data or material inspires us to do better. Keeping this point of view in my mind I decided to work on this project **"An evaluation of free on line journals available on web in the field of engineering and technology"** so that readers could get information regarding journals at hand.

Journals play a vital role in the field of information. There was a time when journals were published in the print form only and these were very costly also, but the time has changed and now the journals are published in the print form as well in the non- print form. Non print form journals are available on web. These journals are available on web at free of cost. Any one can collect different type of information through these journals. These journals are available on web in two different forms, one is open access form and the second one is closed access form. The journals those are available on closed access form require a password to access, that can be taken through registration but the journals which are available in open access form does not require a password to access.

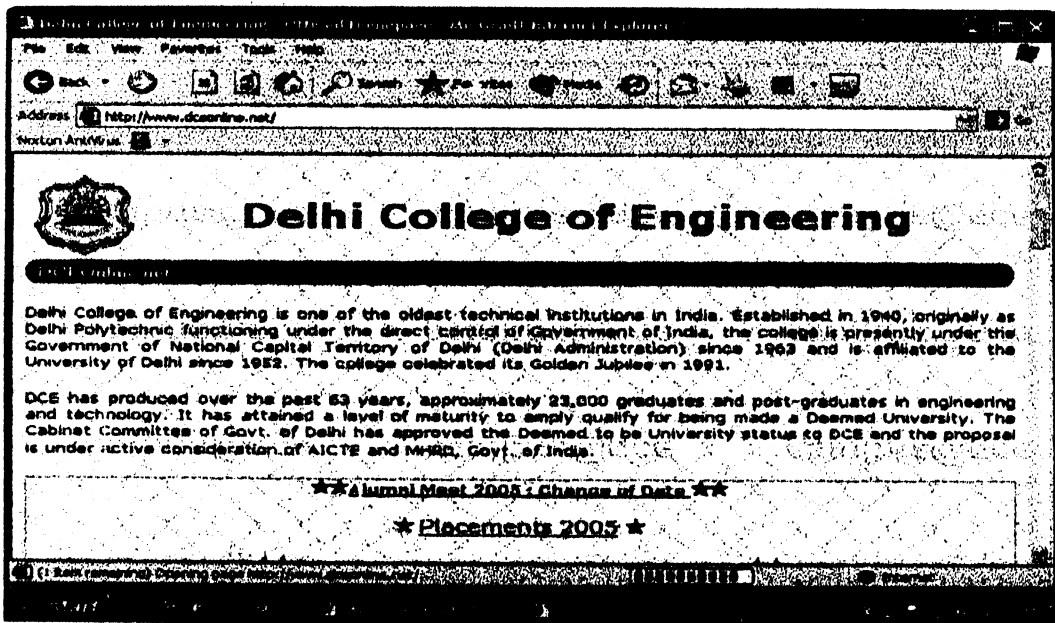

Various search engines are available to find out these journals on web. These search engines are categories into four category. One is General search engines, second one is Regional search engines, third one is Subject specific search engines and the fourth one is Meta search engines, but only general search engines such as GOOGLE, MSN, ALTAVISTA, YAHOO, etc, were used in this project to find out the journals in the field of engineering and technology.

There are forty six journals in this project in the field of engineering and technology. All journals are searched through different search engines so all have different and effective information for the benefit of the users. Any one can collect the information regarding the contents of these journals , editor's name, starting year, latest publications, research papers, etc on a single spot and on a single subject. So they may save their time and energy

## TOOLS/ENVIRONMENT USED -

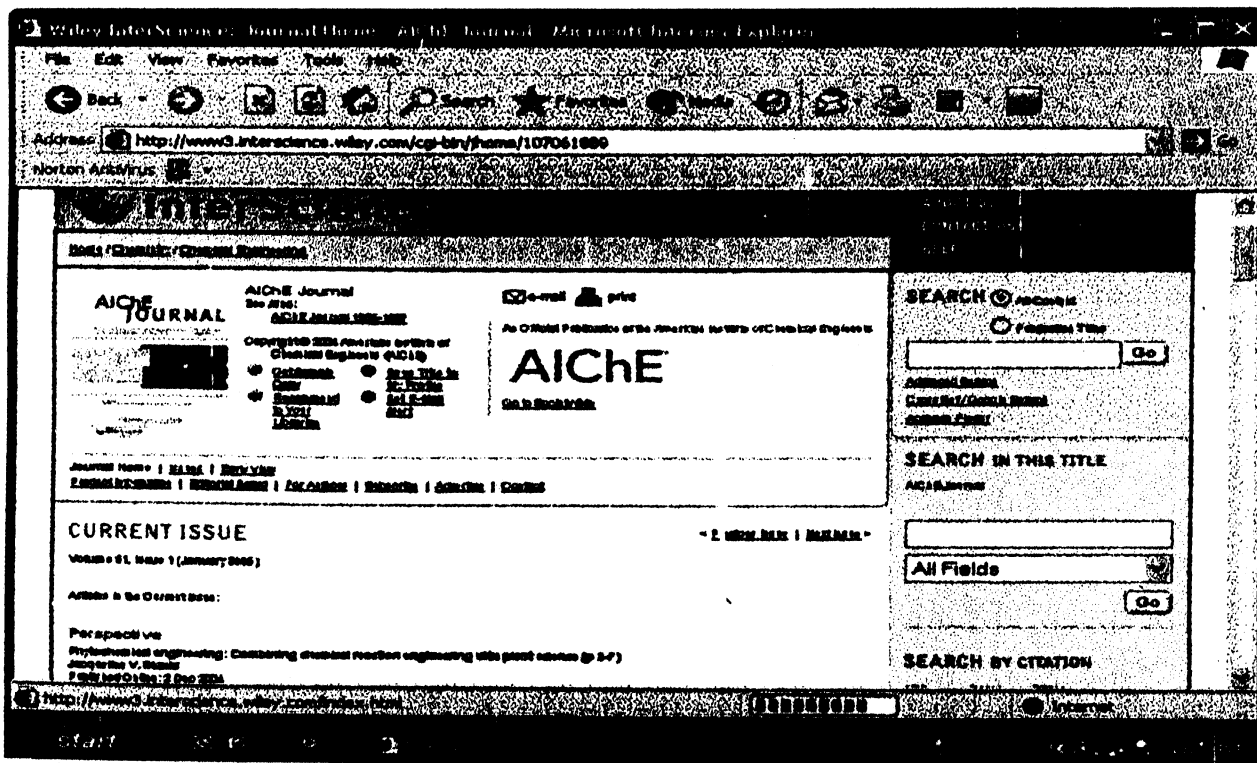

In this project pantium4 is used with windows. There are various general search engines such as, google, msn, yahoo, altavista etc, which used to find out the journals in the field of engineering and technology. The connection of Internet is through VSNL. This project is made in an engineering college's centre library. Floppies and CDs were also used to carry the data.

# OBJECTIVES AND METHODOLOGY OF THE PROJECT

The main objective of this project is to provide a consolidated list of free journals along with their web address to "save the time of the users". Due to explosion of knowledge in the field of engineering and Technology its literature is growing vast day by day, so it is not possible for any library and information centre to store this Information in documents.

To fulfill the demand of fourth law of library science, "save the time of the reader" internet information resources play a very big role to fulfill this demand. Most of the internet information are free of cost, so every Library and information centre can collect these information free of cost to fulfill the requirements of readers. These informations are more acquainted with the latest development in their regarding fields

This project of free on line journals plays a vital role in dissemination of information and knowledge in the field of engineering and technology.

Various search engines such as yahoo, google, altavista, msn etc, are used for searching the journals in the field of engineering and technology. After search the journals they are verified from the actual site and their details like editor' name, country from which it published, its frequency, about the book reviews, search papers, starting year, current issues, all volumes details, editorial information and coverage etc, are ascertained.

## **LIMITATIONS-**

Around sixteen thousand journals are available on web in the field of engineering and technology but this project is not a major research project and it is to be made on a small scale on around fifty to sixty pages as per the requirement of the project, only forty-six journals were selected to evaluation.

There are lots of search engines that are available on web to find out the journals in the field of engineering and technology but only general search engines were used to find out the journals in the field of engineering and technology.

Journals were selected as per ranks of access so journals that may be better might have been left due to lack of awareness and subsequent access ranking by search engines.

Some better journals require a password to access so they cannot be opened without registration.
